1729	14.92	1772	14.52	1815	15.26	1858	15.38	1901	34.68		

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, from 1897 to 1914 from daily London quotations, and since from daily New York quotations.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production and coinage of gold and silver and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission, and the available data for the calendar year under review are usually incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries, the most reliable data available are used in compiling world statistics.

COINAGE OF NATIONS

CALENDAR YEAR 1939

Country	Monetary unit	Gold		Silver		
		Value in monetary units named	Value in United States dollars [1]	Value in monetary units named	Value of fine ounces consumed [2]	Fine ounces consumed

[2] Gold delivered by the Reichsbank.

REVISIONS, 1939 MONETARY STOCKS

Principal revisions and changes of data relative to monetary stocks for 1939, published in last year's volume, are as follows:

Australia's paper circulation should have been shown as £57,275,000.

British West Africa's silver stock for all its colonies should be $4,247,511 instead of $10,000.

Egypt's paper circulation from 26,495,000 to 28,050,000 Egyptian pounds. Silver stock shown from $16,376,000 to $19,618,000.

No information was shown in the 1939 table relative to Iceland's gold and paper. The Landsbanki Islands, the National Bank of Iceland, held kr. 5,761,709 of gold coin on December 31, 1939; converted at $0.4537 equals $2,614,087. This is a note-issuing bank, belonging entirely to the State, with notes outstanding of kr. 13,560,000 also as of this date.

Norway's gold stock increased to $93,984,000 from $93,916,000; silver stock decreased to $1,589,000 from $5,664,000.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEAR 1940

The following compilations have been made from answers to official questionnaires of the United States Mint Bureau, central bank reports, and other official sources, except as indicated by footnote.[1] It is understood that material amounts of gold are not reported by several countries, such as amounts held in secret funds for stabilizing currencies and those hoarded or held outside of regularly reported stocks. The amount of silver in circulation in many countries is not obtainable. Population figures are principally those supplied by the Bureau of Foreign and Domestic Commerce, United States Department of Commerce.

Monetary stock of principal countries of the world, end of calendar year 1940 (subject to revision)

Stated in United States money (000 omitted), except paper circulation, which is stated in monetary unit of issuing country (000 omitted). $1=15\frac{5}{21}$ grains of gold $\frac{9}{10}$ fine: i. e., an ounce of fine gold=$35. Population (000 omitted)]

Country	Monetary unit			Gold stock (conversions to United States equivalent at legal parity except as indicated by footnotes)			Monetary silver stock in government treasuries, in banks, and, when data available, in circulation (United States equivalent of reported face amount at exchange rate)	Paper circulation in monetary unit of issuing country	Population	Per capita

[1] Data used from other than official sources:
Brazil, Federal Reserve Bulletin, March, 1941.
Mexico, Federal Reserve Bulletin, March 1941.
Norway, Federal Reserve Bulletin, March 1941.
Thailand, League of Nations Monthly Bulletin, March 1940 (data as of July 1940).

[2] Exchange rates are official unless otherwise indicated.

[3] Includes any paper currency held outside the continental limits of the United States.

[4] Bases used for conversions of gold holdings to United States dollars:
Canada, holdings of Government Treasury converted at legal parity; holdings of Bank of Canada reported at $20.67 an ounce.
Ecuador, revaluation of June 4, 1940, at 0.0602 gram fine gold per sucre (United States equivalent, $0.06774).
Estonia, gold revalued in part on March 6, 1939, at 0.2802 gram fine gold per kroon (United States equivalent, $0.315302).
France, by decree of February 29, 1940, gold revalued on basis of 23.34 milligrams gold 0.900 fine per franc (United States equivalent, $0.023637).
Hungary, the assets and liabilities of the National Bank of Hungary, expressed in gold or foreign exchange, were revalued on the basis of the existing premium during January 1939. Gold is taken to account at a price of 5700 pengo per kilogram (United States equivalent, $0.1974).
Japan, gold revaluation effective Aug. 25, 1937, at 0.29 gram fine gold per yen (United States equivalent, $0.32633).
Latvia, revaluation of 1939 on the basis of 6,656 lats=1 kilo of gold (United States equivalent, $0.1989).
Netherlands, the gold holdings of the Central Bank of Netherlands were written up to 2,009 florin per kilogram fine on Mar. 16, 1940 (United States equivalent, $0.560162).
Netherlands Indies, Central Bank, the Javasche Bank, revalued its gold stock during 1940 on the basis of 2,121 florins per kilogram of fine gold—Conversion rate used, $0.53056.
Rumania, gold revalued on May 19, 1940, at 0.0043 gram fine gold per leu (United States equivalent, $0.0048949).
Switzerland, revalued May 31, 1940, at 0.2053 gram of fine gold per franc (United States equivalent, $0.23101).

[5] Net issues of silver coin.

[6] Colombia law of Nov. 19, 1938, established new gold content of peso at 0.507816 gram of fine gold (United States equivalent, $0.5714).
France, law of Oct. 1, 1936, provided for new gold content of franc to be fixed within limits of 43 and 49 milligrams of gold 0.900 fine. This law was superseded by decree of June 30, 1937; which stated that gold content of the franc shall be fixed ultimately by a decree adopted by the Council Ministers. Until issuance of such decree a stabilization fund shall regulate the relationship between the franc and foreign currencies.
Indo-China, French, monetary unit, the piaster, has a par value of 10 French francs.
Latvia, law of Sept. 28, 1936, pegged the lat to sterling at 2,522 lati to £100).
Mexico, decree of Aug. 28, 1936, left the monetary unit, the peso, to be later defined by law.
Switzerland, order of Federal Council enacted Sept. 27, 1936, instructed the Swiss National Bank to maintain the gold parity of the Swiss franc at a value ranging between 190 and 215 milligrams of fine gold.
Syria, monetary unit, the Syrian pound, has a par value of 20 French francs.
Uruguay, monetary unit, the peso, established by monetary law of Jan. 12, 1938, at 0.585018 gram of pure gold (United States equivalent, $0.6583).

[7] Prior years figure.

[8] Exchange rate as of December 30, 1940.

[9] Includes coin.

[10] United States coin and currency also circulate.

[11] United States currency is circulating media.

[12] Silver in circulation not included.

[13] Includes 180,000 copper coins.

[14] Exclusive of Canadian bank notes which are the principal circulaing media.

[15] Includes Tobago.

[16] Gold and foreign exchange.

[17] Holdings end of March 1940.

[18] April 1940 (Source: League of Nations, Monthly Bulletin of Statistics).

[19] As of June 30, 1940.

[20] Includes population of Dobrudja Province annexed from Rumania in September 1940.

[21] Exchange rate for June 1940.

[22] Average exchange rate for first six months of 1940.

[23] Includes bullion.

[24] Dec. 26, 1940.

[25] As of Mar. 31, 1941.

[26] The Malayan (Straits Settlements) dollar is linked to sterling at the rate of one dollar for two shillings and four pence.

[27] Of which 126,585,000 is legal tender in Burma only.

[28] Indo-China, French, the monetary unit, the piaster, has a par value of 10 French francs.

[29] As of Sept. 9, 1940.

[30] Converted from British pounds.

[31] Includes 107,257 British sterling converted to escudos at 110 to the pound.

[32] Includes notes in circulation in Northern Rhodesia and Nyasaland.

[33] At the average exchange rate for 1939.

[34] Subsidiary coin only held by the South African Reserve Bank.

Production of gold and silver in the world since the discovery of America

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint]

Period	Gold				Silver				Percentage of production			
	Annual average for period		Total for period		Annual average for period		Total for period		By weight		By value	
	Fine ounces	Value	Fine ounces	Value [1]	Fine ounces	Commercial value [2]	Fine ounces	Commercial value [2]	Gold	Silver	Gold	Silver
1493–1520	186,470	$3,855,000	5,221,160	$107,931,000	1,511,050	$2,085,249	42,309,400	$58,386,972	11.0	89.0	64.9	35.1

[1] Valued, prior to 1934, at $20.67+ per fine ounce; 1934 and thereafter, at $35 per fine ounce.

[2] Valued, prior to 1701, at $1.38 per fine ounce, which corresponds with a commercial ratio of silver to gold of approximately 15 to 1, the ratio which prevailed for over 100 years subsequent to 1687, as per tabulation elsewhere in this volume. From 1701 to 1840 the value corresponds with the average ratios of silver to gold as per the tabulation elsewhere in this volume. From 1841 the annual averages per fine ounce in London are used except for the years 1915 to 1921, and 1931 to 1939, when New York prices are used. Tabulations of silver quotations appear elsewhere in this volume.

Production of gold and silver in the world since the discovery of America—Continued

Period	Gold				Silver				Percentage of production			
	Annual average for period		Total for period		Annual average for period		Total for period		By weight		By value

Activities, general	6
Acts authorizing coinage	60–63
Alabama, production of gold and silver	33, 34
Alaska:	
Production of gold and silver	33, 34
Production review	18
Appalachian States, production of gold and silver, review	23, 24
Appropriations, expenses, and income	6, 76, 77
Appropriations, reimbursements, expenditures, and balances, fiscal year 1941	78
Arizona:	
Production of gold and silver	33, 34
Production review	19, 20
Arts, industrial, gold and silver used:	
In United States, 1940	5, 36
In United States since 1880	37
In world	95
Assay commission, annual test of coins	12, 13
Assay office, at New York:	
Deposits, income, expenses, and employees	6
Employees by departments	12
Assets and liabilities	79, 80, 82, 83

B

Balances, receipts, and disbursements of gold bullion	8
Bars, refined issue-bars manufactured	11
Bars of gold issued for industrial use	7
Bases, statistical	48
British India, imports and exports of gold and silver since 1873	86
Bullion and coin imported and exported	41, 58
Bullion and coin imported and exported, by calendar years since 1873	59
Bullion:	
Deposit transactions	4, 6, 49
Deposits and purchases	6, 42, 44, 50, 52
Gains and losses	11
Gold and silver imported and exported to and from British India since 1873	86
Gold receipts, disbursements, and balances	8
In mints and assay offices	8, 79, 82
Number of deposit transactions	4, 6
Proof (1.000 fine)	9
Recovered (surplus) in ounces	9, 10
Silver exports from London to the East since 1881	85
Silver, refined, exports from United States since 1900	85
Stock of, in United States	5, 79, 82
Transfer of, for long term storage	4
Value of a silver dollar since 1837	90
Bureau of the Mint:	
Employees	6, 12
Expenses	6, 76, 78

California: Page
Production of gold and silver 33, 34
Production review 20–22
Central States of the United States, review of production of gold and silver 22
Coin:
Demand for, during fiscal year 1941 3
Deposits since 1873 54
Domestic, specifications 60–62
Minor, issued, melted, and outstanding 8, 9
Test by annual assay commission 12, 13
Withdrawn from monetary use 46, 55, 56, 91
Coin and bullion:
Imported and exported 41, 58
Stock of, in mints and assay offices 79, 82, 83
Stock of, in United States 5, 79, 82, 83
Coinage by the United States for other countries 3, 7, 38
Coinage of nations, 1939 and 1940 92, 93
Coinage of the United States:
Authority for coinage, changes in weight and fineness, amounts 60–63
By classes (gold, silver, minor, total) and calendar years since 1793 68–75
By each mint and by denominations:
Since 1793 64
During past 10 years, in value and pieces 64
Calendar year 1940 38
Commemorative 60–62, 69
Fiscal year 1941 3, 7
Gold, by denominations and calendar years since 1793 68
Gold, by fine ounces, value, and fiscal years, since 1873 60
Minor, by denominations and calendar years since 1793 72, 73
Minor, issued, melted, and outstanding 9
Review of 3
Seigniorage on silver and minor coins 6, 76
Silver, by denominations and calendar years since 1793 70, 71
Silver, by fine ounces, value, and fiscal years since 1873 60
Uncurrent coin used in 46, 55, 56
Coining department operations 9, 10, 11, 12
Coins, domestic, bearing date 1792 63
Coins withdrawn from monetary use. (*See* Withdrawn coin.)
Colorado:
Production of gold and silver 33, 34
Production review 22, 23
Commemorative coins:
Authority for coinage, weight, fineness, amounts 60–63
Consumption of gold and silver in the world 95
Consumption of gold and silver in the United States 5, 6

D

Denver Mint:
Coinage 7, 64–67
Deposits, income, expenses, and employees 6, 76
Employees, by departments 12
Receipts of gold and silver 8, 42, 44, 50, 52, 57
Deposits, earnings, expenditures, and employees, by institutions 6
Deposits and purchases of gold 4, 42, 50
Deposits and purchases of silver 4, 44, 52, 58
Deposits of foreign bullion and coin 39, 40, 57, 58
Deposits of gold since 1873 54
Deposits of silver since 1873 54
Deposits of silver in trust by foreign countries 52, 58
Deposit transactions, number 4, 6, 40, 49
Disbursements, receipts, and balances of gold bullion 8
Dollar, silver bullion value of, since 1837 90

REPORT OF THE DIRECTOR OF THE MINT ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1939

REPORT OF THE DIRECTOR OF THE MINT ON THE
OPERATIONS OF THE MINT SERVICE
FOR THE FISCAL YEAR 1939

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 1, 1939.

SIR: In compliance with the provisions of section 253, title 31, U. S. Code, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1939, being the Sixty-seventh Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1938.

OPERATION OF THE MINTS AND ASSAY OFFICES

Institutions of the Mint Service

During the fiscal year ended June 30, 1939, seven mint institutions were in operation: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which handles the major portion of the gold imported and exported, and its auxiliary silver bullion depository at West Point; gold bullion depository at Fort Knox, Ky.; mint at New Orleans, conducted as an assay office; and assay office at Seattle. The two last-named institutions are, in effect, merely bullion-purchasing agencies and also serve the public by making assays of ores and bullion. Electrolytic refineries are maintained at the New York, Denver, and San Francisco institutions.

Coinage

Domestic coin manufactured during the fiscal year amounted to 255,566,260 pieces, as compared with 540,375,283 pieces during the preceding year. As in previous years, the coin most largely produced was the one-cent piece. The production in 1939, in amount $15,538,378, consisted of 70,511,806 subsidiary silver coins, $11,029,058; 66,469,400 nickel coins, $3,323,470; and 118,585,054 bronze coins, $1,185,850.

Coinage for foreign governments amounted to 48,187,200 pieces, compared with 18,392,444 pieces during the prior year. The foreign coinage consisted of silver, nickel, and bronze coins for Honduras, Nicaragua, Colombia, Cuba, and Venezuela, all made at Philadelphia.

The grand total of domestic and foreign coins made in 1939 amounted to 303,753,460 pieces, a decrease of 255,014,267 pieces from the prior year.

Bullion Deposit Transactions

The number of bullion deposit transactions during the year totaled 54,028, including 272 inter-mint-service transactions, as compared with 56,005 and 298, respectively, during the prior year. The deposit transactions required 91,506 assay determinations, which compares with 85,187 assay determinations during the prior year.

Gold Operations

Gold acquisitions by the mints and assay offices during the year amounted to $3,224,890,527.63; receipts from other Treasury offices of domestic and foreign coin melted during the year amounted to $924,646.88; and transfers between mint-service institutions amounted to $79,025,827.39. These transactions total $3,304,841,001.90, compared with $1,210,362,607.83 for the prior year.

The acquisitions include $210,734.73 of gold received at $20.67 per fine ounce. The increment on this gold amounted to $146,107.71.

Silver Operations

The Government's acquisitions of silver during the year totaled 416,391,965 fine ounces, at an average cost of 46.7 cents per fine ounce and a total cost of $194,551,774. The acquisitions consist of the following:

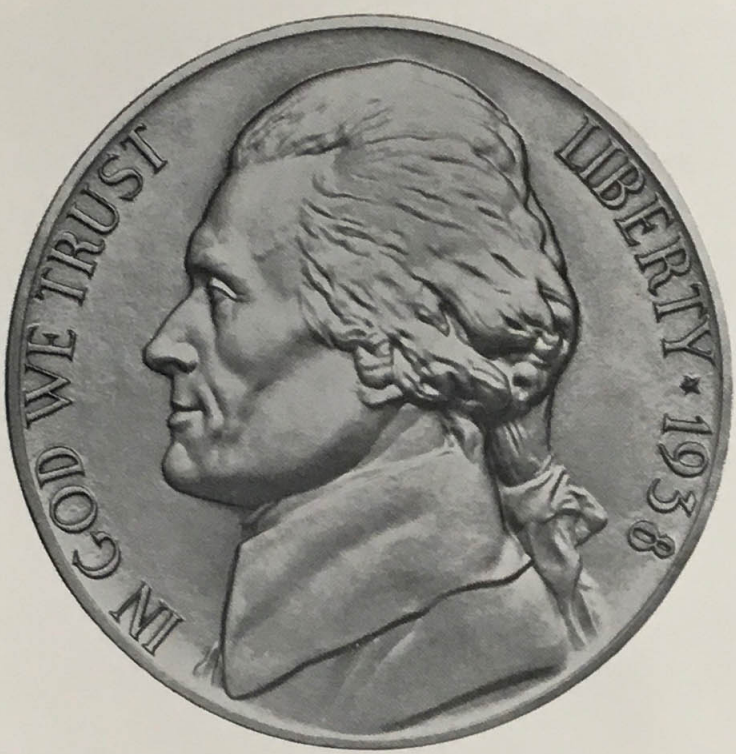
Item	Amount (fine ounces)	Cost
Newly mined domestic silver	63,150,404	$41,308,430
Purchase Act silver	352,718,452	153,023,320
Silver contained in gold bullion deposits, etc.	372,169	156,629
Silver received in exchange for Government stamped bars	150,940	63,395
Total	416,391,965	194,551,774

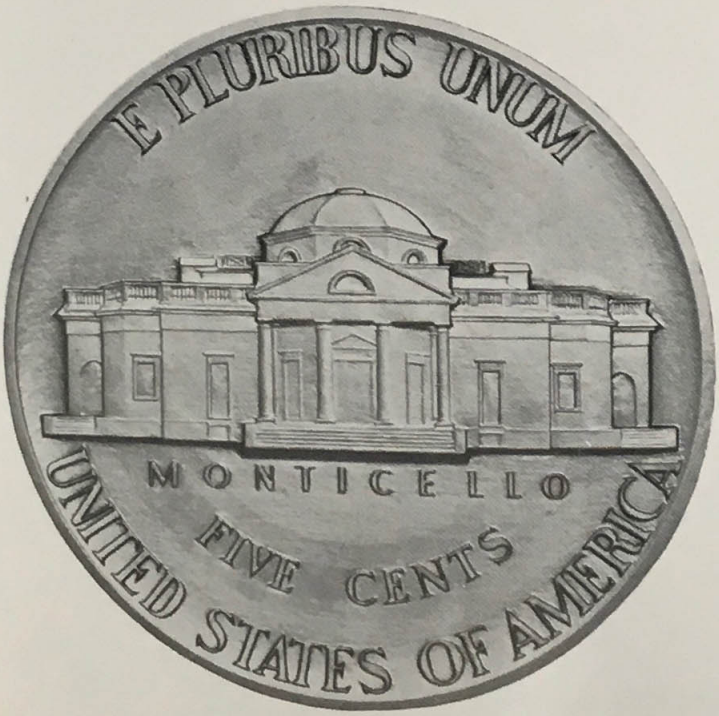
United States coin received for recoinage totaled 3,204,054 fine ounces, with a recoinage value of $4,429,313. Silver deposited by other governments, for foreign coinage, totaled 15,521,737 fine ounces. Silver transfers between mint-service institutions totaled 49,723 fine ounces. These items plus the silver acquired during the year brought the total transactions in silver to 435,167,479 fine ounces, compared with the prior year's total of 412,354,246.

During the year 1939, $193,422,222 of silver certificates were issued against 149,600,000 fine ounces of silver bullion valued at $1.29+ per fine ounce, the statutory monetary value of silver. Such silver had been acquired at an average price of 57.9— cents per ounce. The difference between the cost of the silver held to secure such certificates and the monetary value of such silver is $106,872,260, and this amount constitutes seigniorage.

The open-market price of silver in New York (mean of bid and asked) during the fiscal year 1939 averaged $0.42996. The highest point was $0.43062, which prevailed from July 1, 1938 to June 26, 1939. The price declined during the last four days of June to $0.38062 on June 30, 1939.

For newly mined domestic silver a return to the depositor of $0.6464+ per fine ounce, established by the President's proclamation of December 1937, prevailed during the entire fiscal year.





THOMAS JEFFERSON COIN.

Refineries

The electrolytic refineries produced during the year 5,588,913 fine ounces (191.6 tons) of electrolytically refined gold bullion, and 3,459,089 fine ounces (118.6 tons) of silver bullion. During the prior year the quantities produced were 3,079,343 fine ounces (105.6 tons) of gold and 1,605,294 fine ounces (55.0 tons) of silver.

Stocks of unrefined gold and silver bullion in mint institutions increased during the fiscal year 1939 by approximately 175 tons, to 1,764 tons. The increase in 1938 was about 274 tons.

New Design Coins

The new design Thomas Jefferson 5-cent nickel coin was issued during the fiscal year 1939, for replacing the Indian-head or Buffalo design coin. The obverse of the new coin carries a portrait likeness of Thomas Jefferson, while on the reverse appears a likeness of Monticello, his historic Virginia home. Though many millions of these coins have been issued and remain outstanding, they still are not a common medium of exchange in the daily experience of the general public. Illustrations of this coin, which was designed by Felix Schlag, face this page.

No commemorative coins, bearing special designs relating to historic events, were initially issued during the fiscal year 1939.

By the act of August 7, 1939, a Commemorative Coin Commission was established for considering proposals submitted to the Congress for issue of commemorative coins. If the Commission reports that the event to be commemorated is not of sufficient national importance, no further action is to be taken on the proposal. If the Commission reports favorably, the bill will take the usual course. The act repealed all prior acts authorizing the issue of commemorative coins.

Mint Buildings

The silver bullion depository at West Point, operated as an auxiliary of the New York assay office, was occupied in July 1938. The movement of silver bars from the Government buildings and rented quarters in New York City to the depository continued from early in July to the middle of February—approximately 7½ months. An average of 20 truck loads daily was moved, the total movement consisting of 1,101,320 refined silver bars containing 1,169,444,788 fine ounces of silver.

At the San Francisco Mint the newly constructed silver vaults were placed in use in February 1939. Movement of the silver bars from the old mint continued from February to June, a period of about 4 months. The movement consisted of 306,049 bars with fine silver content of 339,787,786 fine ounces of silver.

Stock of Coin and Monetary Bullion in the United States

On June 30, 1939, the estimated stock of domestic coin in the United States was $1,088,037,109, of which $547,078,589 was standard silver dollars, $379,811,988 subsidiary silver coin, and $161,146,532 minor coin.

The stock of gold bullion, including coin, held in the Treasury on the same date was valued at $16,110,078,913, an increase of $3,147,-124,982; and the stock of silver bullion was 2,089,983,790 fine ounces, an increase of 411,451,384.

Production of Gold and Silver

Domestic gold production during the calendar year 1938 was 5,089,811 fine ounces with a monetary value of $178,143,400 compared with 4,804,540 fine ounces with a monetary value of $168,-158,900 in 1937. The quantity output was about 4 percent more than that for the previous year of largest production, 1915, when the total was 4,887,604 fine ounces.

Domestic silver production during the calendar year 1938 totaled 62,665,335 ounces. This compares with 71,941,794 ounces for 1937, and with the record production of 74,961,075 fine ounces for 1915.

Industrial Consumption of Gold and Silver

Gold consumption in the industrial arts during the calendar year 1938 is estimated at $30,156,754. Gold returned from industrial use amounted to $30,480,835. These items give a net return from industry of $324,081. This compares with $3,214,393 net industrial consumption of new gold during the previous year.

Silver used in the arts is estimated at 38,620,473 fine ounces, of which 20,181,626 fine ounces were new material.

Compared with the prior year, there was a decrease in gold consumption of approximately 270,000 ounces, and a decrease in silver consumption in industry of about 12,700,000 ounces.

Appropriations, Expenses, and Income

Regular appropriations available for the mint service during the fiscal year 1939 totaled $1,561,920; the appropriation for meeting emergency expenses amounted to $750,000; the Deficiency Act of March 5, 1938 provided funds for silver movements (totaling $110,700, available during the two fiscal years 1938 and 1939) of which $17,360 were obligated in 1938, leaving $93,340 available for the fiscal year 1939; and reimbursements to appropriations for services rendered amounted to 329,211, making a total of $2,734,471.

Expenses amounted to $2,776,707, of which $2,718,068 was chargeable to appropriations and $58,639 chargeable to income.

The regular income realized by the Treasury from the mint service aggregated $12,809,959, of which $6,489,967 was seigniorage. The seigniorage on subsidiary silver coin was $3,569,708, and on minor coin $2,920,259. Extraordinary income aggregated $107,018,368, of which $106,872,260 was seigniorage on silver bullion revalued to $1.29+ per ounce, and $146,108 was the increment to $35 per ounce on revalued gold.

General Activities

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1939, and number of employees on June 30, 1939, at each institution, are shown in the following table:

Deposits of gold and silver, income, expenses, and employees, by institutions, fiscal year 1939

Institution	Number of bullion deposit transactions	Number of assay determinations on bullion deposits	Monetary value of gold and silver receipts, including transfers [1]	Gross regular income	Gross expenses	Excess of income (+) or of expenses (−)	Employees, June 30, 1939
Philadelphia	7,728	12,674	$54,134,573	$4,789,976	$841,980	+$3,947,996	380
San Francisco	19,224	26,476	534,177,093	2,394,526	419,947	+1,974,579	178

[1] Includes inter-institution transactions, $79,090,115.

Domestic Coinage

Details of the coinage executed during the fiscal year ended June 30, 1939, follow:

Denomination	Philadelphia	San Francisco	Denver	Total value	Total pieces
Silver:					
Half dollars:					
Regular	$1,147,747.50		$647,100.00	$1,794,847.50	3,589,695
Arkansas centennial	1,052.00	$1,052.50	1,052.00	3,156.50	6,313
Daniel Boone bicentennial	2,502.50	2,503.00	2,502.50	7,508.00	15,016
Oregon Trail	1,502.00	1,502.50	1,502.00	4,506.50	9,013
Quarter dollars	3,032,437.00	708,000.00	476,000.00	4,216,437.00	16,865,748
Dimes	3,140,002.10	809,000.00	1,053,600.00	5,002,602.10	50,026,021
Total silver	7,325,243.10	1,522,058.00	2,181,756.50	11,029,057.60	70,511,806
Minor:					
5-cent nickel	2,849,420.00	205,250.00	268,800.00	3,323,470.00	66,469,400
1-cent bronze	830,350.54	117,900.00	237,600.00	1,185,850.54	118,585,054
Total minor	3,679,770.54	323,150.00	506,400.00	4,509,320.54	185,054,454
Total coinage	11,005,013.64	1,845,208.00	2,688,156.50	15,538,378.14	255,566,260
Prior year:					
Total coinage face amount	21,337,090.70	1,638,812.00	3,635,007.50	26,610,910.20	
Total coinage pieces	456,927,444	32,330,024	51,117,815		540,375,283

Coinage by the United States for Other Countries

The coinage for other countries during the fiscal year 1939, all by the mint at Philadelphia, totaled 48,187,200 pieces, as compared with 18,392,444 pieces during the prior fiscal year coined by the Philadelphia and San Francisco mints. Details follow:

Country	Pieces	Country	Pieces
Silver: Cuba	20,000,000	Bronze:	
		Honduras	4,000,000
Nickel:		Nicaragua	2,000,000
Colombia	11,787,200		
Cuba	2,000,000	Total bronze	6,000,000
Nicaragua	800,000		
Venezuela	7,600,000	Total coinage	48,187,200
Total nickel	22,187,200	Prior fiscal year, total coinage	18,392,444

Mint Issue of Fine Gold Bars for Industrial Use

(On value basis; see p. 48)

The value of the fine gold bars issued for industrial use, in exchange for cash, by the United States mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1939, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1938:		1939:	
July	$19,443.47	March	$25,610.87
August	15,791.70	April	13,876.02
September	27,049.14	May	28,034.51
October	22,126.90	June	13,110.31
November	12,768.04		
December	23,166.31	Total	244,604.29
1939:			
January	27,925.51	Prior fiscal year	313,368.15
February	15,701.51		

Receipts and Disbursements of Gold Bullion and Balances on Hand

Receipts and disbursements of gold bullion during the fiscal year 1939, and balances on hand June 30, 1939, as compared with June 30, 1938, are shown in the following table:

Institution	Balance on hand June 30, 1938	Receipts during fiscal year 1939 (details below)[1]	Total	Disbursements during fiscal year 1939 (details below)[1]	Balance on hand June 30, 1939
Philadelphia	$5,226,763.09	$5,219,919.56	$10,446,682.65	$131,911.68	$10,314,770.97
San Francisco	637,757,567.27	448,373,347.69	1,086,130,914.96	118,123,966.78	968,006,948.18
Denver	3,827,118,691.69	115,822,566.21	3,942,941,257.90	14,297.46	3,942,926,960.44
New York	2,966,298,666.48	3,819,699,371.75	6,785,998,038.23	1,123,351,612.33	5,662,646,425.90

[1] Includes transfers.

Minor Coins Outstanding

The following statement shows the coinage of minor coins, by denominations, the amount on hand at the mints, issued, melted, and outstanding June 30, 1939. Minor coins were first manufactured at the Philadelphia Mint in 1793, at the San Francisco Mint in 1908, and at the Denver Mint in 1911.

Item	Coined	On hand at mints unissued	Issued	Melted	Amount issued and outstanding June 30, 1939
Copper half cents [1]	$39,926.11		$39,926.11	$1.84	$39,924.27
Copper cents	1,562,887.44		1,562,887.44	383,580.95	1,179,306.49
Copper-nickel cents	2,007,720.00		2,007,720.00	809,106.95	1,198,613.05
Bronze cents	73,654,003.26	$878,546.34	72,775,456.92	1,803,576.71	70,971,880.21
Bronze 2 cents	912,020.00		912,020.00	344,050.16	567,969.84
Nickel 3 cents	941,349.48		941,349.48	287,926.02	653,423.46
Nickel 5 cents	100,475,567.70	996,630.00	99,478,937.70	11,179,415.65	88,299,522.05
Total	179,593,473.99	1,875,176.34	177,718,297.65	14,807,658.28	162,910,639.37

[1] There is no record of the melting of the old copper half cents, but it is believed that few, if any, are now in circulation.

Proof Bullion (1.000 fine)

In order to maintain uniformity in assay of bullion in the offices of the mint service, all proof gold and proof silver are made at one institution and furnished to other institutions when required. Proof gold is made at the New York Assay Office, while the Philadelphia Mint makes proof and inquartation silver. During the fiscal year 1938 other mints and assay offices were furnished 276 ounces of proof gold, 72 ounces of proof silver, and 5,272 ounces of inquartation silver.

Operations of the Melting and Refining and of the Coining Departments, Fiscal Year 1939

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1939, was 95.0 million fine ounces of gold and 90.6 million fine ounces of silver. There were also operated upon at the coinage mints 50.6 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative offices, as prescribed in section 355, title 31, United States Code, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

GOLD BULLION

[1] Net.

which met at the Philadelphia Mint February 8, 1939, reported the following results of their examination of the 1938 coinage:

In accordance with section 3539 of the Revised Statutes, your committee on counting reports that the packages said to contain the pieces reserved by the several mints for the trial of coins were delivered to us by the superintendent of the mint at Philadelphia.

A liberal number of packages were selected from the deliveries of each month of all denominations coined, and the coins contained therein were counted and found to agree with the number designated on each envelope.

The committee on assaying has completed the assays on samples taken from different lots of coin representing all denominations coined during the year 1938 by the United States mints at Philadelphia, San Francisco, and Denver.

No gold was coined at any of the mints during the year 1938.

The result of the assays upon coins and mass melts made from coins is satisfactory, being well within the legal limits of tolerance, which is three one-thousandths for silver coins.

The highest and lowest assays on individual silver coins selected were as follows:

	Highest	*Lowest*
Philadelphia Mint	901. 0	898. 4
Denver Mint	900. 0	899. 0
San Francisco Mint	900. 6	899. 0

Mass Melts:

Philadelphia Mint	899. 3
Denver Mint	899. 3
San Francisco Mint	899. 5

The committee on weighing reports that it received from the committee on assaying the residues of the several parcels of reserved coins, and took therefrom at random such a number of pieces of each of the denominations represented and so distributed by dates of coinage as seemed to be sufficient for the purpose of weighing. Accordingly, 40 pieces were selected for weighing. These coins have been severally weighed by the committee and their respective weights ascertained to an accuracy of 0.01 grain, and the results recorded. The weights of these coins are given in the appended table. It will be noted that every coin weighed was within the deviation allowed by law.

The coins were directly weighed against a set of sealed coin weights, supplemented by a set of grain weights, delivered to the commission from the Bureau of Standards, Washington, D. C., in sealed packages and accompanied by certificates signed by the Director of the Bureau. The weighings were made on a Wm. Ainsworth & Sons, Inc., type TA Spec. balance, an even arm analytical balance, which was tested for sensitiveness and equality of arms and found to be satisfactory for the purpose.

The maximum deviation from the standard of the heaviest and the lightest coins of each denomination from each mint is shown in the following table:

Item	Legal deviation allowed	Philadelphia		San Francisco		Denver	
		Heavy	Light	Heavy	Light	Heavy	Light
	Grains	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*
Half dollar	1. 5	0. 22	0. 40	[1] 0. 43	[2] 0. 05	----------	0. 54
Quarter dollar	1. 5	0. 80	0. 69	0. 19	0. 40	----------	----------
Dime	1. 5	0. 65	0. 25	0. 50	0. 10	0. 20	----------

[1] Daniel Boone commemorative half dollar.
[2] Oregon Trail commemorative half dollar.

There was no coinage of regular half dollars at the mint of San Francisco, or coinage of quarter dollars at the mint of Denver in 1938.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1938, is respectfully submitted.

NELLIE TAYLOE ROSS,
Director of the Mint.

Hon. HENRY MORGENTHAU, Jr.,
Secretary of the Treasury.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1938

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1938

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1938 is estimated to have been 5,089,811 fine ounces, valued at $178,143,400, and the production of silver is estimated at 62,665,335 fine ounces, valued at $40,510,924. A comparison of these figures with those of 1937 indicates about 285,000 fine ounces increase in production of gold and approximately 9,276,000 ounces decrease in silver production.

In continental United States, the State of largest gold production, California, increased its output in 1938 more largely than any of the other States, its increase being about 148,000 fine ounces to a total of over 1,317,000 fine ounces. Washington and Oregon materially increased their output, the former by about 35,000 fine ounces and the latter by over 26,000 fine ounces. The increase in the Philippine Islands was larger than that of California, it amounting to 152,000 fine ounces, giving the year's total of over 844,000 fine ounces, which exceeded that of any State except California. Alaska's increase amounted to 31,000 fine ounces, and its total output for the year was nearly 660,000 fine ounces.

The 1938 silver product increased more largely in Colorado than in any other State of the Union—by over 1,500,000 fine ounces as compared with 1937. The larger reductions occurred in Montana, nearly 5,000,000 fine ounces; Utah, 2,400,000 fine ounces; Arizona, over 2,000,000 fine ounces; Idaho, over 1,100,000 fine ounces, and Nevada, over 600,000 fine ounces. Idaho continued as the State of largest silver output, its total being nearly 18,400,000 fine ounces, with Utah second in rank, nearly 10,300,000 fine ounces.

A brief review of mining conditions, for which acknowledgements are made to the United States Bureau of Mines, follows. The production figures therein differ, as explained above, from the Bureau

of the Mint production estimates. Further information concerning same can be obtained by those interested by addressing the Bureau of Mines at Washington.

ALASKA

The production of gold from ores and gravels of Alaska during 1938 was 664,973 fine ounces valued at $23,274,055, an increase of 6 percent over 1937, according to Chas. W. Henderson, of the United States Department of the Interior, Bureau of Mines. Since there are no smelters or refineries in Alaska, the bulk of the gold produced in 1938 was in the form of bullion and dust sent to United States mints and assay offices either directly or through banks or bullion buyers located in the larger mining centers of Alaska. The rest was contained in high-grade ore and concentrates sent to the Selby (Calif.) and Tacoma (Wash.) smelters. Some very small lots of bullion, dust, and high-grade ore and concentrates were sent to experimental plants and small capacity smelters located in the western part of the United States.

Floating connected-bucket dredges accounted for 42 percent of the total gold output from all sources in 1938, being 9 percent higher than the 1937 production from this type of operation. There were 44 dredges in operation in 1938, an increase of 3 over 1937. The gravel handled by these dredges averaged 49 cents in value of recoverable gold per cubic yard washed. The United States Smelting, Refining, and Mining Co., operating 6 dredges in the Fairbanks (part of Tanana) district and 3 dredges in the Nome district using auxiliary hydraulic and drift mining methods, was by far the largest producer from this type of operation. Other producers of a notable quantity of gold from floating connected-bucket dredges were: The Arctic Circle Exploration, Inc., in the Fairhaven district; Alluvial Gold, Inc., C. J. Berry Dredging Co., and Gold Placers, Inc., in the Circle district; and the New York Alaska Gold Dredging Corporation in the Tuluksak-Aniak district.

The increased use of mechanical equipment, such as draglines, slack-line scrapers, caterpillar-bulldozers, and hydraulic with auxiliary washing plants caused the gold produced from all types of placer mines, excluding floating connected-bucket dredges, to show the largest percentage increase (10 percent over 1937), but a net increase smaller than that of the dredges. The Yukon Basin, Seward Peninsula, Kuskokwim, and Cook Inlet regions were the largest contributors from this type of operation.

Gold produced from lode mines decreased slightly (less than one-half of 1 percent) in 1938 over 1937. Nine additional lode mines were in operation, but their added output was insufficient to offset the decline in production from the two largest lode mines in Alaska in 1938. Over 63 percent of the total lode gold produced was contained in the bullion and high-grade concentrates produced by the Alaska Juneau Gold Mining Co. properties in the Juneau district, southeastern Alaska region. The Alaska Juneau Gold Mining Co. mined 4,663,880 tons of rock, of which 2,184,952 tons were rejected as "coarse-tailings"; 2,478,928 tons were "fine milled," from which the gold recovery was 0.0515 ounces per ton in bullion and 0.0081 ounces per ton in galena concentrates. The gold content of rock from "mine to mill" was 0.0398 ounce per ton. Other important producers from this source were: Alaska-Pacific Consolidated Mining Co. and Willow Creek

Mines, Inc. (operated in the latter part of 1938 by the Conwest Exploration Co.), in the Cook Inlet region; the Nabesna Mining Corporation in the Copper River region, and Hirst-Chichagof Mining Co., in the southeastern Alaska region.

The output of silver, 479,853 fine ounces in 1938, a decrease of 14,487 fine ounces from 1937, was produced as a byproduct of gold and copper mining. Copper mines in the Copper River region, permanently abandoned late in 1938, produced over one-half of the total silver obtained from Alaska ores and gravels during 1938. The remainder was contained in the gold bullion, amalgam, and dust produced from placer and lode mines through the Territory.

ARIZONA

The output of gold, silver, copper, lead, and zinc from mines in Arizona in 1938 was valued at $58,358,401, compared with $90,855,462 in 1937, a decrease of $32,497,061, or 36 percent, according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. General curtailment in the principal copper-producing districts of Arizona caused a decrease in the output of copper ore from 19,928,824 tons in 1937 to 13,047,356 tons in 1938, which resulted in similar decreases in the output of gold, silver, and copper. The output of lead ore and zinc-lead ore also decreased in 1938 but the output of siliceous ores increased from 804,949 tons in 1937 to 928,707 tons in 1938.

The output of recoverable gold from lode mines and placers in Arizona in 1938 was 305,043 ounces valued at $10,676,505, compared with 332,694 ounces valued at $11,644,290 in 1937. Gold recovered from copper ore decreased from 176,918 ounces in 1937 to 133,409 ounces in 1938, but gold from dry and siliceous ores increased from 131,927 ounces in 1937 to 150,371 ounces in 1938. Lode mines produced 300,058 ounces of gold in 1938 and placers 4,985 ounces. Dry and siliceous ores yielded 49 percent of the total gold in 1938, copper ore 44 percent, and zinc-lead ore 5 percent; the remaining 2 percent came from other base ores and from placers. Dry and siliceous ores treated at amalgamation and cyanidation mills increased from 431,740 tons in 1937 to 616,544 tons in 1938 and the output of gold (in bullion and concentrates) increased from 84,154 ounces to 103,635 ounces. Ore treated by straight concentration decreased from 18,203,790 tons in 1937 to 10,546,807 tons in 1938 and the gold in the concentrates produced decreased from 89,758 ounces to 78,522 ounces. Crude ore shipped to smelters decreased from 2,340,829 tons in 1937 to 1,659,601 tons in 1938 and gold therefrom decreased from 154,359 ounces to 117,901 ounces. The Phelps Dodge Corporation was by far the largest gold producer in Arizona; the company operated its copper mines at Bisbee, Ajo, and Jerome at a reduced rate in 1938 but the output of gold in copper ore and concentrates shipped to smelters represented 39 percent of the State total. Most of the remainder of the gold from copper ore came from the Magma mine at Superior and the Denn mine at Bisbee. Large producers of gold from dry and siliceous ores (treated chiefly by cyanidation) included the Gold Road, Tom Reed, Big Jim, Gold Standard, Pilgrim, and Pioneer mines in Mohave County, the Mammoth-St. Anthony property in Pinal County, and the Octave, Hillside, and Alvarado mines

in Yavapai County. Most of the gold from zinc-lead ore came from the Tennessee property in Mohave County and the Ruby (Montana) mine in Santa Cruz County.

The output of recoverable silver in Arizona in 1938 was 7,479,153 ounces valued at $4,835,008, compared with 9,422,552 ounces valued at $7,288,344 in 1937. Most of the decrease was due to curtailment in the output of copper ore although silver from lead ore and zinc-lead ore also decreased. Copper ore yielded 61 percent of the total silver in 1938. The Phelps Dodge Corporation was, as usual, the chief silver producer in Arizona and in 1938 its three properties (Copper Queen, New Cornelia, and United Verde) produced 51 percent of the State total. Other large silver producers in 1938 included the Ruby (Montana) group of the Eagle-Picher Mining & Smelting Co. in Santa Cruz County, the Ash Peak property of Veta Mines, Inc., in Greenlee County, and the Magma Copper Co. at Superior, Pinal County.

CALIFORNIA

California gold output in 1938 again exceeded that in the Philippine Islands, Alaska, or South Dakota, the other leading producers, according to Charles White Merrill of the United States Bureau of Mines. The quantity of gold produced in 1938 was greater than that for any year since 1862 and its value was greater than that for any year since 1856. Although the data for gold production in California before 1901 do not segregate placer and lode gold, it appears certain that the output of lode gold was greater in 1938 both in quantity and value than in any preceding year in the history of the State. Placer gold production during 1938 is known to have exceeded any year since 1900, and it appears to have exceeded that for any year since unrestricted hydraulic mining flourished over 50 years ago.

The output of gold from California ores, gravels, and re-treated tailings in 1938 was 1,311,129 fine ounces valued at $45,889,515 compared with a production of 1,174,578 ounces valued at $41,110,230 in 1937; the increase in both quantity and value was 12 percent. This represented an accelerating rate of increase as the gain of 1937 over 1936 had been only 9 percent. In 1938 lode mines produced 738,616 ounces of gold valued at $25,851,560, and placer mines produced 572,513 ounces of gold valued at $20,037,955. Lode mines accounted for 56 percent and placer mines 44 percent of the total in 1938 compared with a division of 60 and 40 percent, respectively, in 1937. The production of lode gold increased only 5 percent in 1938 compared with 1937, whereas production of placer gold increased 21 percent. Of the gold derived from lode operations, 95 percent was recovered from dry gold ore; most of the remaining 5 percent was derived from dry gold-silver ore. The importance of free-milling gold ore in California is brought out by the fact that 46 percent of the lode gold was recovered by amalgamation; cyanidation of sands, slimes, old tailings, and concentrates accounted for 31 percent; smelting of concentrates 22 percent; and smelting of ore 1 percent. These metallurgical data when compared with those for 1937 show a decline in the importance of amalgamation and an increase in the application of cyanidation.

Dredging was the leading method of working placer deposits, both in point of yardage of gravel treated and quantity of placer gold recov-

ered. Floating dredges of the connected-bucket type handled 117,080,000 cubic yards of gravel and recovered 375,296 ounces of gold valued at $13,135,360 or 66 percent of the placer gold produced in the State in 1938. Dragline dredges (those having floating washing plants, to which gravel is delivered by a dragline type of power excavator) handled 24,560,000 yards of gravel which yielded 118,108 ounces of gold valued at $4,133,780. Nonfloating washing plants to which gravel was delivered by mechanical means treated 3,538,000 yards of gravel and recovered 23,046 ounces of gold valued at $806,610. Hydraulic mines accounted for the production of 7,061 ounces of gold valued at $247,135, derived from 1,719,000 yards of gravel; 97,000 yards of gravel from drift mines were treated with a recovery of 7,144 ounces of gold valued at $250,040. Small-scale hand methods, including small sluice boxes, long toms, dip boxes, rockers, pans, and dry washers, were used in the production of 41,858 ounces of gold valued at $1,465,030. Increases in 1938 over 1937 were recorded by all methods except drift mining and small-scale dry hand mining.

Nevada County, because of the productivity of its Grass Valley-Nevada City district, continued to be the leading gold-producing county of the State; 25 percent of the State's gold and 41 percent of the State's lode gold was mined there during 1938. The output of dredges, both connected-bucket and dragline, was largely responsible for the importance of Sacramento, Yuba, Merced, Butte, Placer, Trinity, and Siskiyou Counties. Amador, Calaveras, Eldorado, Mariposa, and Tuolumne Counties on the Mother Lode were important gold producers. In addition, large outputs were recorded for Kern, Shasta, and Sierra Counties.

The principal gold-producing companies working California mines in 1938, arranged in order of importance as producers, included the Empire Star Mines Co., Ltd., Nevada County (gold ore), Idaho Maryland Mines Corporation, Nevada County (gold ore), Natomas Co., Sacramento County (dredge), Yuba Consolidated Gold Fields, Yuba County (dredge), Capital Dredging Co., Sacramento County (dredge), Lava Cap Gold Mining Corporation, Nevada County (gold ore), Central Eureka Mining Co., Amador County (gold ore), Carson Hill Gold Mining Corporation, Calaveras County (gold ore), Golden Queen Mining Co., Kern County (gold ore), Yuba Consolidated Gold Fields, Merced County (dredge), and Cactus Mines Co., Kern County (gold-silver ore).

The output of silver from California ores, gravels, and re-treated tailings in 1938 was 2,590,804 fine ounces valued at $1,674,863 compared with the production of 2,888,265 ounces valued at $2,234,073 in 1937; the decreases in quantity and value were 10 and 25 percent, respectively. Of the lode silver, 52 percent was derived from dry gold-silver ore; 39 percent from dry gold ore; 7 percent from dry silver ore; and the remaining 2 percent from base-metal ores. A small quantity of silver was recovered as a byproduct of gold dredging. One-half of the lode silver was recovered by flotation followed by smelting of concentrates; 35 percent was recovered by cyanidation of ore, old tailings, sands, slimes, and concentrates; 11 percent by direct smelting; 3 percent by amalgamation of ore and old tailings; and 1 percent by gravity concentration followed by smelting of concentrates.

The principal silver-producing companies working California mines in 1938, arranged in order of importance as producers, were the Cactus Mines Co., Kern County (gold-silver ore), Lava Cap Gold Mining Corporation, Nevada County (gold ore), Lodestar Mining Co., Kern County (gold-silver ore), Frank Royer, San Bernardino County (gold-silver ore), and Golden Queen Mining Co., Kern County (gold ore).

CENTRAL STATES

None of the mines in the Central States reported any production of gold in 1938.

The output of silver from mines in the Central States increased from 206,041 ounces in 1937 to 386,210 ounces in 1938. All of the Michigan output in 1938 (93,634 ounces) was derived from copper ore. The entire output of silver from Missouri in 1938 (292,000 ounces) was from the refining of lead bullion and the treatment of skinnings; no copper ore was treated. Silver recovered from galena concentrates shipped from southern Illinois fluorspar mines in 1938 was 576 ounces compared with 887 ounces in 1937.

COLORADO

The total mine output of gold from lode and placer mines in Colorado in 1938, in terms of recovered metal, was 367,468 ounces, compared with 368,905 ounces in 1937 and 366,607 ounces in 1936, a variation of less than 1 percent annually during the 3 years, according to Chas. W. Henderson and A. J. Martin of the United States Department of the Interior, Bureau of Mines. The gold produced in 1938 was valued at $12,861,380. The only other minerals produced in the State during the year that exceeded gold in total value of the output were molybdenum and coal. The principal gold-producing districts, in order, were the Cripple Creek district, Teller County, which yielded 40 percent of the State total; Mosquito, Park County, 9 percent; Animas, San Juan County, 6 percent; Summitville, Rio Grande County, 5 percent; Empire, Clear Creek County, 5 percent; Redcliff, Eagle County, 5 percent; Upper San Miguel, San Miguel County, 4 percent; Gold Hill, Boulder County, 3 percent; Sneffels, Ouray County, 3 percent; and Leadville, Lake County, 3 percent. Substantial gains over 1937 were made in gold production in San Miguel, Eagle, Rio Grande, Ouray, Boulder, and San Juan Counties. The largest decreases from 1937 occurred in Park, Lake, Summit, La Plata, and Gilpin Counties.

Colorado mines yielded 7,932,095 ounces of recoverable silver in 1938, compared with 6,260,693 ounces in 1937. Eagle County produced 67 percent of the total output in 1938; San Juan County, 8 percent; San Miguel County, 6 percent; Mineral County, 6 percent; Ouray County, 3 percent; and Pitkin County, 2 percent; and 27 other counties together produced 8 percent. Increases over 1937 of more than 100,000 ounces of silver occurred in Eagle, Mineral, San Juan, and San Miguel Counties; and decreases from 1937 of more than 50,000 ounces occurred in Lake and Dolores Counties.

The number of lode mines in Colorado producing gold and silver in 1938 was 669, and placer mines 592. Thirty-five of the larger lode mining operations employing a total of approximately 3,384 men,

produced 74 percent of total State gold and 85 percent of the silver. The total ore sold or treated during the year was 1,996,095 tons, of which 1,528,658 tons were classed as dry and siliceous (gold, gold-silver, and silver) ores and yielded 87 percent of the total gold and 26 percent of the silver. Copper ore yielded 5 percent of the gold and 68 percent of the silver. Lead, lead-copper, zinc, and zinc-lead ores combined yielded 3 percent of the gold and 6 percent of the silver (the latter including a small quantity from placer mines). Placer mines produced 5 percent of the total State gold. Approximately 1,841,965 cubic yards of gravel were handled by 2 floating connected-bucket dredges and 25 dry-land and dragline floating dredges; specific data on yardage handled at small-scale placer operations are not obtainable because of lack of knowledge by the operators of the quantity of gravel sluiced. The total production of gold and silver in Colorado, in terms of recovered metals, compiled from all sources by Chas. W. Henderson, from 1858 to 1938, inclusive, has been: Gold, 37,182,538 ounces; silver, 692,441,670 ounces.

EASTERN AND APPALACHIAN STATES

The mine production of gold in the Eastern and Appalachian States increased from 10,681 fine ounces in 1937 to 19,928 ounces in 1938. The increase was mainly due to mines in South Carolina though there were other increases in Georgia, North Carolina, Pennsylvania, and Virginia. Four gold lode mines, two in South Carolina and one each in North Carolina and Virginia produced more than 77 percent of the gold recovered in the Eastern States in 1938. There was a sharp decrease in the number of placer mines operated in 1938, but the number of lode gold mines operated increased about one-third.

In 1938 Alabama mines produced only 41 ounces of gold (in 1937 2,460 ounces), Georgia 872 ounces, Maryland 855 ounces, North Carolina 1,878 ounces, Pennsylvania 1,422 ounces, South Carolina 11,681 ounces, Tennessee 236 ounces, and Virginia 2,943 ounces. About 26 placer mines in Alabama, Georgia, North Carolina, South Carolina, and Virginia produced 667 ounces of gold in 1938 compared with 632 ounces in 1937. Placer mines in Georgia yielded 578 ounces. The estimated output of gold in the Southern Appalachian States from 1790 to 1938, inclusive, is recorded as 2,532,776 ounces.

Lead-zinc ore yielded 23 ounces of gold, copper ore and copper concentrates from magnetite ore in Tennessee, North Carolina, and Pennsylvania 1,797 ounces which was 76 ounces more than in 1937.

In 1938, 88,671 tons of siliceous ore from mines in Alabama, Georgia, Maryland, North Carolina, South Carolina, and Virginia were treated yielding 17,441 ounces of gold. Ore treated at gold and silver mills aggregated 87,615 tons yielding 13,894 ounces of gold and gold concentrates shipped to smelters (542 tons) 2,497 ounces. Only 1,056 tons of siliceous ore were shipped crude to smelters; this ore yielded 1,050 ounces of gold. Ore amalgamated (11,621 tons) yielded in bullion 1,633 ounces and ore cyanided (75,994 tons) yielded 12,261 ounces.

The larger producers of gold from siliceous ore were the Haile and Terry mines in South Carolina, the Maryland mine near Bethesda, Md., the Vaucluse mine in Orange County, Va., and the Capps mine near Charlotte, N. C.

The mine output of silver was 94,945 ounces in 1938 against 106,873 ounces in 1937.

Of the 1938 output, copper ore from Tennessee yielded 38,333 ounces, copper ore from North Carolina 4,907 ounces, copper concentrate from Pennsylvania 9,360 ounces, and lead concentrates from zinc-lead ores from New York, Tennessee, and North Carolina 38,263 ounces. Siliceous ores (mainly from North Carolina and South Carolina) yielded 4,813 ounces. Only 39 ounces of silver were derived from placer bullion.

IDAHO

The output of gold, silver, copper, lead, and zinc from mines in Idaho in 1938 was valued at $29,028,103, compared with $37,840,184 in 1937, a decrease of $8,812,081, or 23 percent, according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. Curtailment in the output of lead ore and zinc-lead ore at the large mines in the Coeur d'Alene region, the principal producing area in Idaho, caused a marked decrease in the output of lead and zinc; silver and copper decreased slightly but the output of gold increased greatly.

The output of recoverable gold increased from 81,861 ounces valued at $2,865,135 in 1937 to 103,513 ounces valued at $3,622,955 in 1938, a gain of 26 percent; the gold output in 1938 was the largest recorded since 1896 when 112,409 ounces were produced. Gold from lode mines increased 20 percent to 49,434 ounces and that from placers increased 33 percent to 54,079 ounces. Most of the gold from placer mines came from nine connected-bucket dredges operating in Boise, Camas, Idaho, and Owyhee Counties; these dredges treated 6,693,700 cubic yards of gravel in 1938 and recovered 31,234 ounces of gold. Nineteen dragline or power-shovel excavators with either dry-land or floating washing plants operating in 8 counties (chiefly Idaho, Gem, Owyhee, and Boise) treated 2,713,000 cubic yards of gravel in 1938 and recovered 17,448 ounces of gold, an increase of 10,589 ounces over that in 1937. Small-scale placer operations (including drift mining) yielded 5,397 ounces of gold, about the same as in 1937. The largest placer producers in Idaho in 1938 were Fisher-Baumhoff Co. in Boise County, Moores Creek Dredging Co., Warren Dredging Co., and Newsome Creek Placers (all in Idaho County), Jordan Creek Placers in Owyhee County, and Ralph Divis, Inc., in Gem County.

Nearly 88 percent of the total gold from lode mines came from dry and siliceous ores and nearly all of the remainder came from zinc-lead ore. Dry and siliceous ores treated at amalgamation and cyanidation mills increased from 145,056 tons in 1937 to 186,163 tons in 1938; the 1938 tonnage yielded 19,703 ounces of gold (in bullion and concentrates) and came chiefly from Idaho, Elmore, Lemhi, and Boise Counties. Ore treated at straight concentration plants yielded 22,641 ounces of gold in the concentrates, and crude ore shipped direct to smelters yielded 7,090 ounces. The Golden Anchor mine at Burgdorf, the Triumph mine near Hailey, the Yellow Pine property at Stibnite, the Mayflower mine at Placerville, and the Boise-Rochester property at Atlanta were the chief producers of gold from lode operations in Idaho in 1938.

The output of recoverable silver in Idaho decreased from 19,587,766 ounces in 1937 to 18,993,676 ounces in 1938, a drop of only 3 percent

in quantity from the record output in 1937, but the value of the silver output decreased from $15,151,137 to $12,278,740, or 19 percent, as the average sales price of silver declined from $0.7735 per ounce in 1937 to $0.646+ per ounce in 1938. Idaho retained its position as the largest silver-producing area in the United States. Dry and siliceous silver ore yielded 72 percent of the total silver produced in Idaho in 1938, zinc-lead ore 19 percent, and lead ore 8 percent. The output of silver from silver ore and lead ore decreased in 1938 but silver from zinc-lead ore increased, due chiefly to the marked increase in output from the Triumph mine in Blaine County. The Sunshine mine near Kellogg, Shoshone County, retained its position as the largest producer of silver in the United States although its output decreased slightly from 12,152,000 ounces in 1937 to 11,352,154 ounces in 1938. Eight mines—the Sunshine, Polaris, Bunker Hill, Hecla, Triumph, Morning, Crescent, and Page—produced 94 percent of the silver output of the State in 1938. All these mines, except the Triumph, are in the Coeur d'Alene region, Shoshone County.

MONTANA

The output of gold, silver, copper, lead, and zinc from mines in Montana in 1938 was valued at $28,096,746, compared with $58,402,016 in 1937, a decrease of $30,305,270, or 52 percent, according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. Marked decreases were recorded in the output of silver, copper, lead, and zinc in 1938, due to curtailment in the output of base ores at mines in Silver Bow, Granite, Jefferson, and Sanders Counties, but the output of gold increased slightly because of regular operations at cyanidation mills in several counties.

The output of recoverable gold increased slightly from 202,252 ounces valued at $7,078,820 in 1937 to 203,313 ounces valued at $7,115,955 in 1938. Gold from lode mines increased 2,110 ounces to 167,965 ounces in 1938 but gold from placers decreased 1,049 ounces to 35,348 ounces. Dry and siliceous gold ore increased from 644,596 tons in 1937 to 756,223 tons in 1938 and yielded 75 percent of the total gold produced in Montana in 1938. The 1938 output of gold ore comprised 433,233 tons treated at cyanidation plants (310,979 tons in 1937), 77,478 tons treated at amalgamation plants, 190,709 tons treated at concentration plants, and 54,803 tons shipped direct to smelters. The ore treated at amalgamation and cyanidation mills (510,711 tons) yielded 76,890 ounces of gold (in bullion and concentrates), or 38 percent of the State total. Ore treated at straight concentration plants comprised 190,709 tons of gold ore, 109,546 tons of silver ore, 1,561,804 tons of copper ore, and 114,769 tons of zinc-lead ore; concentrates produced from this ore yielded 32,061 ounces of gold, or 16 percent of the State total. Crude ore shipped direct to smelters (160,118 tons) yielded 59,014 ounces of gold, or 29 percent of the total. The West Mayflower mine (operated by the Anaconda Copper Mining Co.) in Madison County was the largest gold producer in Montana in 1938; the entire output at the mine was crude ore shipped for smelting. Other large lode gold producers in 1938 were the Ruby Gulch mine in Phillips County, the Butte Highlands mine in Silver Bow County, and the Golden Messenger mine in Lewis

and Clark County; cyanidation plants were in operation at these three properties.

Several new placer operations were started in Montana in 1938, including the new Yuba dredges of Winston Bros. on Prickly Pear Creek and Perry-Schroeder Mining Co. on Hauser Lake and the dragline and washer plants of Ralph E. Davis Syndicate on Grasshopper Creek, Kit Carson Placers on Lowland Creek, and Norman Rogers Mining Co. on Elk Creek; but gains from these plants were more than offset by losses due to suspension of operations on Clancey Creek by the Humphreys Gold Corporation. The Porter dredge at Helena and the Pioneer dredge near Gold Creek were again the largest placer producers in Montana.

The output of silver in Montana in 1938 was 6,403,962 ounces valued at $4,139,935, compared with 11,812,093 ounces valued at $9,136,654 in 1937, a decrease of 46 percent in quantity and 55 percent in value. Silver from Silver Bow County decreased 4,053,327 ounces in 1938 due to the closing of the zinc mines and curtailment in the output of copper mines of the Anaconda Copper Mining Co. at Butte. Silver from Granite County decreased 1,013,138 ounces in 1938 due to the closing of several mines near Philipsburg. Copper ore yielded 60 percent of the State total silver in 1938, silver ore 23 percent, zinc-lead ore 7 percent, and gold ore 6 percent. Nearly 74 percent of the total silver came from ore concentrated and 24 percent came from crude ore shipped for smelting. The output of silver ore decreased from 246,325 tons in 1937 to 150,930 tons in 1938. The Anaconda Copper Mining Co. was, as usual, the largest silver producer in Montana; in addition to the copper and zinc mines at Butte the company produced considerable silver from the Flathead mine near Kalispell. Other large producers of silver in 1938 included the Comet mine near Basin, the Trout, Granite, Bimetallic, Two Percent, and Silver Prince mines near Philipsburg (Granite County), and the, Big Seven and Florence mines near Neihart, Cascade County.

NEVADA

In 1938 Nevada gold production increased slightly over 1937 and in value was larger than that for any year since 1915, but silver output declined both in quantity and value, according to Charles White Merrill of the United States Bureau of Mines. The output of gold from Nevada ores, retreated tailings, and gravels in 1938 was 296,434 fine ounces valued at $10,375,190 compared with 281,332 ounces valued at $9,846,620 in 1937, an increase of 5 percent in quantity and value. Silver production in 1938 was 4,355,471 fine ounces valued at $2,815,658 compared with 4,864,750 ounces valued at $3,762,884 in 1937, a decline of 10 percent in quantity and 25 percent in value.

Gold was recovered from the following sources: Dry gold ore, 67 percent; copper ore, 16 percent; dry gold-silver ore, 11 percent; placer gravels, 4 percent; and other ores, 2 percent. Compared with 1937, there was a large increase in the importance of dry gold ore as a source of gold in 1938 and a corresponding decrease in the importance of copper ores. Cyanidation was a more important gold-recovery method in Nevada in 1938 than in 1937; 42 percent of the lode gold was recovered by cyanidation. Amalgamation, by which 12 percent of the Nevada lode gold was recovered in 1938, also showed

an increase in importance compared with 1937. The percentages of Nevada lode gold recovered by smelting of concentrates and ore in 1938 were 26 and 20, respectively, and represented decreases compared with the preceding year. The principal Nevada gold-mining companies, arranged in order of importance as producers in 1938, included the Black Mammoth Consolidated Mining Co., Esmeralda County (gold ore), Consolidated Coppermines Corporation (and lessees), White Pine County (copper ore), Getchell Mine, Inc., Humboldt County (gold ore), Nevada Consolidated Copper Corporation, White Pine County (copper ore), Weepah Nevada Mining Co., Esmeralda County (gold ore and old tailings), Consolidated Chollar Gould & Savage Mining Co., Storey County (gold ore), Chiquita Mining Co., Ltd., Clark County (gold ore), lessees of The Tonopah Mining Co. of Nevada, Nye County (gold-silver ore), Penelas Mining Co., Nye County (gold ore), and Sierra Nevada, Ltd., Storey County (gold ore).

Nevada silver was recovered from the following sources in 1938: Dry gold-silver ore, 36 percent; dry silver ore, 29 percent; dry gold ore, 13 percent; copper ore, 10 percent; zinc-lead ore, 7 percent; lead ore, 4 percent; and placer gravel, the remainder. Direct smelting of crude ore accounted for 42 percent of the lode silver produced in Nevada in 1938; 31 percent was recovered by cyanidation, 26 percent was recovered by smelting of concentrates, and the remaining 1 percent by amalgamation.

The principal silver-mining companies in Nevada in 1938, arranged in order of importance as producers, were Desert Silver, Inc., Esmeralda County (silver ore), lessees of the Tonopah Mining Co. of Nevada, Nye County (gold-silver ore), Consolidated Coppermines Corporation and lessees, White Pine County (copper ore), Combined Metals Reduction Co., Lincoln County (zinc-lead ore), Tonopah Belmont Development Co. and lessees, Nye County (gold-silver ore), Bristol Silver Mines Co., Lincoln County (silver ore), Consolidated Chollar Gould & Savage Mining Co., Storey County (gold ore), Sutro Tunnel Coalition, Inc., Storey County (gold-silver ore), Nevada Consolidated Copper Corporation, White Pine County (copper ore), and Nevada Standard Mining Corporation, White Pine County (gold-silver ore).

NEW MEXICO

Lode and placer mines in New Mexico produced 43,050 ounces of recoverable gold, valued at $1,506,750, in 1938 compared with 41,171 ounces, valued at $1,440,985, in 1937, according to mine-production figures compiled by Chas. W. Henderson and A. J. Martin, of the United States Department of the Interior, Bureau of Mines. The Willow Creek district, San Miguel County, yielded 32 percent of the State total output of gold in 1938, all from zinc-lead-gold-silver-copper ore from the Pecos mine. This mine was closed on May 31, 1939, because of a shortage of ore in paying quantity. The Mogollon district, Catron County, ranked second in gold production in 1938; followed, in order, by Steeple Rock, Grant County; Lordsburg, Hidalgo County; Mount Baldy, Colfax County; and Hillsboro, Sierra County. Most of the gold from the Hillsboro district came from placer mines and was recovered by operators using dragline excavators and power shovels for digging the gravel and specially

constructed portable land machines for treating it. Some of the other districts that yielded placer gold in 1938, listed in order of quantity produced, were the Jicarilla district, Lincoln County; White Signal and Pinos Altos, Grant County; Pittsburg, Sierra County; San Pedro, Santa Fe County; Mount Baldy, Colfax County; Orogrande, Otero County; Central, Grant County; and Ortiz Mountains, Santa Fe County.

Silver production in New Mexico in 1938 totaled 1,229,860 ounces, in terms of recovered metals, valued at $795,061, compared with 1,243,766 ounces, valued at $962,053, in 1937. Substantial increases in 1938 in the Mogollon, Lordsburg, and Steeple Rock districts were more than offset by a large decrease in the Central district. The Mogollon district produced 35 percent of the State total silver, Willow Creek 26 percent, Steeple Rock 19 percent, and Lordsburg 11 percent.

Some of the large mines in New Mexico that produce copper or lead and zinc as the metals of chief value also yield considerable gold and silver. Of the 2,414,857 tons of ore mined in the State in 1938 by producers of gold, silver, copper, lead, and zinc, 108,689 tons (4.5 percent) were dry and siliceous gold, gold-silver, and silver ores which yielded 49 percent of the State total gold and 59 percent of the silver. These ores came chiefly from the Mogollon, Mount Baldy, Steeple Rock, Victorio (Luna County), Pinos Altos (Grant County), and Sylvanite (Hidalgo County) districts. Zinc-lead ore, which came chiefly from the Willow Creek and Central districts, amounted to 217,707 tons (9 percent of the State total) and yielded 32 percent of the gold and 27 percent of the silver. Copper ore, mostly from the Central and Lordsburg districts, totaled 1,904,374 tons (79 percent), and yielded 12 percent of both the gold and silver. Only 1,265 tons of combined lead and lead-copper ores were mined during the year and their yield of gold and silver was only 0.5 percent and 1 percent, respectively, of the State total. The 182,822 tons of zinc ore produced during the year contained no recoverable gold or silver. Placer mines yielded 6 percent of the State gold and a negligible quantity (167 ounces) of silver. Figures compiled by Chas. W. Henderson show that from 1848 to 1938, inclusive, New Mexico mines have produced 2,048,013 fine ounces of gold and 61,139,542 fine ounces of silver.

OREGON

The quantity of gold produced in Oregon in 1938 was 55 percent greater than in 1937 and its value was the largest in the history of the State, according to Charles White Merrill of the United States Bureau of Mines. The output of gold from Oregon ores, gravels, and retreated tailings was 81,729 fine ounces valued at $2,860,515 compared with 52,662 ounces valued at $1,843,170 in 1937. Placer mines produced 66 percent of the gold and lode mines 34 percent. Dredges of the connected-bucket type treated 7,258,000 cubic yards of material in 1938 compared with 5,017,000 yards in 1937 and recovered 29,006 ounces of gold valued at $1,015,210 compared with 17,178 ounces valued at $601,230 in 1937. Dragline dredges handled 2,891,000 yards of gravel in 1938 compared with 2,085,000 yards in 1937 and recovered 15,939 ounces of gold valued at $557,865 in 1938 compared with 9,126 ounces valued at $319,410 in 1937. Connected-bucket dredges handled 64 percent of the gravel and recovered 54 percent of

the placer gold in Oregon in 1938; dragline dredges handled 25 percent of the gravel and recovered 29 percent of the placer gold. Virtually all of the lode gold was recovered from dry and siliceous gold ore; concentration followed by smelting of concentrates accounted for the major part of the lode gold recovered.

The principal Oregon gold-mining companies in 1938, arranged in order of importance as producers, were: Cornucopia Gold Mines, Baker County (gold ore), Sumpter Valley Dredging Co., Baker County (connected-bucket dredge), Western Dredging Co., Grant County (connected-bucket dredge), Ferris & Marchbank, Grant County (dragline dredge), Rogue River Gold Co., Josephine County (connected-bucket dredge), and B–H Co., Jackson County (dragline dredge). These six companies contributed two-thirds of the gold output of Oregon in 1938.

Oregon ores, gravels, and retreated tailings in 1938 yielded 100,507 fine ounces of silver valued at $64,974 compared with 60,564 ounces valued at $46,846 in 1937; the increase was 66 percent in quantity and 39 percent in value. Almost three-fourths of the silver produced in Oregon in 1938 was recovered from gold ore mined by Cornucopia Gold Mines, Baker County.

SOUTH DAKOTA

The mine production of gold in South Dakota in 1938 was the highest in any year on record, totaling 594,847 fine ounces compared with 581,544 ounces in 1937 and 586,353 ounces in 1936, the former record year, according to Chas. W. Henderson and A. J. Martin, of the United States Department of the Interior, Bureau of Mines. The value of the gold produced in 1938 was $20,819,645. The value of the silver (162,295 ounces, all a byproduct of gold mining) was $104,918. The producing area in South Dakota is comparatively small, comprising only parts of three southwestern counties—Custer, Lawrence, and Pennington—in what is known as the Black Hills. The bulk of the gold continued to come from the Homestake mine, at Lead, Lawrence County, the largest producer of gold in the United States. This mine has been producing almost continuously since 1876 and from that year through 1938 yielded bullion and concentrates that brought a net return of $360,075,014 and paid $115,145,722 in dividends. The ore milled in 1938 amounted to 1,377,314 tons and net receipts for the bullion product (including $77,860 in silver) $19,284,460. No concentrates have been made at the Homestake mills in recent years. At the end of 1938 the mine was opened through the Ross shaft to the 4,400-foot level; both this shaft and the new Yates shaft, begun in 1938 to replace the Ellison shaft, are designed to be sunk to a vertical depth of 5,000 feet.

The Bald Mountain Mining Co. group at Trojan was the second largest producer of gold and silver in South Dakota in 1938; it yielded 118,026 tons of ore from which were recovered 23,899 fine ounces of gold, and 34,012 fine ounces of silver, which together brought a net return of $851,245. The dividends paid during the year totaled $231,250. The Maitland group in the Maitland district and the Gilt Edge-Dakota Maid group in the Bear Butte district, both also in Lawrence County, were important producers in 1938. An average of more than 100 tons of ore were mined and treated daily throughout

the year at each of these mines. The Golden Slipper group 5 miles east of Hill City, Pennington County, produced 12,000 tons of ore yielding bullion and concentrates valued, at net mint and smelter payments, at $106,158 in gold, and $350 in silver. Some gold and silver were recovered from other lode mines in Lawrence and Pennington Counties, operated on a small scale. Placer mines in the State yielded 1,069 fine ounces of gold, and 82 fine ounces of silver in 1938, most of which came from mines on French Creek, Custer County, worked with dragline excavators and portable screening and sluicing plants. Small-scale placer operations were carried on by individuals along streams and gulches in all three counties, but their aggregate output of gold was only 199 ounces. The total production of gold and silver (in terms of recovered metals) in South Dakota from the beginning of production in 1875 to the end of 1938, as compiled by Chas. W. Henderson, has been 18,232,108 ounces of gold, valued at $419,720,989 and 8,832,407 ounces of silver, valued at $6,288,627.

TEXAS

Silver ore from the Presidio mine at Shafter, in Presidio County, yielded all the gold (except 0.53 ounce contained in 8 tons of lead ore shipped from Sierra Blanca, Hudspeth County) and 96 percent of the silver recovered from mines in Texas in 1938, according to Chas. W. Henderson and A. J. Martin of the United States Department of the Interior, Bureau of Mines. The State total mine output of gold was 439 ounces, valued at $15,365, and of silver 1,433,008 ounces, valued at $926,389; in 1937 the production of gold was 562 ounces, valued at $19,670, and silver 1,325,660 ounces, valued at $1,025,398.

The ore of the Presidio mine is found as a replacement of limestone beds and is oxidized, the principal mineral being silver chloride associated with argentite, cerargyrite, galena, anglesite, and cerussite. The mine is equipped with a 350-ton gravity concentration-cyanidation mill, which was operated continuously in 1938 and treated 127,574 tons of ore, yielding 685 tons of table concentrates containing 54.63 ounces of gold, 278,056 ounces of silver, and 684,432 pounds of lead; and precipitates containing 383.84 ounces of gold, 1,101,131 ounces of silver, and 25 pounds of lead. The Plata Verde mine in Hudspeth County, 14 miles southwest of Van Horn, and the Hazel in Culberson County, 16 miles northwest of Van Horn, yielded most of the remainder of the output of silver from the State in 1938. The ore from these two mines and small quantities of ore containing a little silver from 4 other mines and prospects in Culberson and Hudspeth Counties were shipped direct to the El Paso smelter. The total production of gold and silver in Texas (in terms of recovered metals) from the beginning of production in 1885 to the end of 1938, compiled from all sources by Chas. W. Henderson—mostly from the Presidio mine—has been 7,099 fine ounces of gold, and 28,749,634 fine ounces of silver.

UTAH

The output of gold, silver, copper, lead, and zinc from mines in Utah in 1938 was valued at $43,745,902, compared with $87,897,549 in 1937, a decrease of $44,151,647, or 50 percent, according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. Marked decreases were recorded in the output

of all five metals, owing to curtailment in copper operations at Bingham and to the closing of zinc-lead-silver properties at Park City.

The output of recoverable gold decreased from 322,759 ounces valued at $11,296,565 in 1937 to 200,630 ounces valued at $7,022,050 in 1938, a decrease of 122,129 ounces, or 38 percent. Gold recovered from copper ore decreased from 202,427 ounces in 1937 to 98,100 ounces in 1938 as the output of copper ore decreased from 23,197,017 tons to 12,032,385 tons. Gold from lead ore and zinc-lead ore decreased 9,531 ounces and gold from dry and siliceous ores decreased 8,364 ounces. Base ores (copper ore, lead ore, and zinc-lead ore) yielded nearly 65 percent of the State total gold and dry and siliceous ores 35 percent; placers in Utah yielded only 148 ounces of gold in 1938. Ore treated at straight concentration plants yielded 62 percent of the total gold in 1938, crude ore smelted 30 percent, and ore to amalgamation and cyanidation mills 8 percent. Mines in the West Mountain (Bingham) district produced 64 percent of the total gold, despite a decrease of 110,759 ounces in the district output. The Utah Copper Co. was, as usual, the largest gold producer in Utah, followed by the United States Smelting, Refining & Mining Co., the Mercur unit of Snyder Mines, Inc., the Mammoth Mining Co., and the Eureka Standard Consolidated Mining Co.; these five mines yielded 74 percent of the State total gold.

The output of silver decreased from 12,869,117 ounces valued at $9,954,262 in 1937 to 9,682,732 ounces valued at $6,259,544 in 1938. Silver from the Bingham district decreased 1,201,685 ounces, chiefly as a result of curtailment by the Utah Copper Co. Silver from the Park City region declined 1,169,976 ounces due to the closing of the Silver King Coalition and Park Utah Consolidated properties early in the year. Zinc-lead ore yielded 47 percent of the total silver in 1938, dry and siliceous ores 32 percent, lead ore 12 percent, and copper ore 9 percent. Ore treated at concentration plants yielded 57 percent of the total silver and crude ore smelted 43 percent. The United States Smelting, Refining & Mining Co. was again the largest silver producer in Utah, followed by the Tintic Standard Mining Co., Park City Consolidated Mines Co., Utah Copper Co., and Silver King Coalition Mines Co.; these five companies produced 70 percent of the total silver in Utah in 1938.

WASHINGTON

The output of gold, silver, copper, lead, and zinc from mines in Washington was valued at $5,510,440 in 1938, compared with $2,253,054 in 1937, according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. The increase of 145 percent in total value was due chiefly to the starting of milling operations at the Holden property of the Howe Sound Co.; the new mill was placed in operation in April and the company became the largest producer of gold, silver, and copper in Washington.

The output of recoverable gold increased from 36,310 ounces valued at $1,270,850 in 1937 to 74,175 ounces valued at $2,596,125 in 1938; the 1938 output was the largest in the history of mining in the State. Gold recovered from copper ore increased from only 14 ounces in 1937 to 30,650 ounces in 1938 as the output of copper ore increased from 6,631 tons to 373,120 tons; the Howe Sound Co. treated 371,800

tons of copper-gold-silver ore in the new mill at Holden. Gold from dry and siliceous gold ore increased 5,955 ounces in 1938, due chiefly to the increase in gold ore treated by cyanidation at plants in Ferry and Stevens Counties; gold from gold ore shipped to smelters also increased and came chiefly from mines in the Republic district, Ferry County. Ore treated at straight concentration mills increased from 114,566 tons in 1937 to 631,864 tons in 1938 and yielded 42 percent af the total gold produced in 1938; ore to amalgamation and cyanidation mills increased to 212,161 tons (from 142,790 tons in 1937) and yielded 40 percent of the gold; crude ore shipped direct to smelters (57,664 tons in 1938 compared with 37,470 tons in 1937) yielded 16 percent, and placers 2 percent. Most of the placer output came from operations on the Columbia River in Stevens and Ferry Counties. The Howe Sound Co. was by far the largest gold producer in Washington in 1938, followed by the Knob Hill Mines, Inc., at Republic, the Azurite property of the American Smelting & Refining Co. in Whatcom County, the Aurum Mining Co., Eureka Mining & Milling Co., and the Mountain Lion Consolidated Mines Co. (all at Republic, Ferry County), and the First Thought Mine Corporation at Orient, Stevens County.

The output of silver increased from 126,304 ounces valued at $97,696 in 1937 to 380,938 ounces valued at $246,263 in 1938. Nearly half the gain in silver was recorded in Chelan County due to the starting of milling operations by the Howe Sound Co. which became the largest silver producer in the State in 1938. Silver from Okanogan County increased 76,124 ounces in 1938, owing chiefly to operations at the Arlington property; silver from Ferry and Stevens Counties also increased. Gold ore and copper ore each yielded 33 percent of the State total silver in 1938 and silver ore yielded 29 percent. Ore treated at straight concentration plants yielded 65 percent of the silver and ore smelted 20 percent. In addition to the Howe Sound Co. and Arlington Mines, Inc., other important silver producers in Washington in 1938 included the Knob Hill, Aurum, and Quilp properties at Republic, the Silver Queen property (Ark Mines Co.) at Kettle Falls, and the Josephine property (Pend Oreille Mines & Metals Co.) at Metaline Falls.

WYOMING

Mines in Wyoming produced 798 fine ounces of gold and 328 fine ounces of silver in 1938 compared with 1,776 ounces of gold and 203 ounces of silver in 1937, according to Chas. W. Henderson and A. J. Martin of the United States Department of the Interior, Bureau of Mines. The only silver produced in the State in 1938 that was not a byproduct of gold mining was 34 ounces contained in silver ore shipped from the Sunlight district, Park County. Placer mines in the Atlantic City district, Fremont County, worked with dragline excavators and portable land screening and sluicing plants, continued to yield most of the State gold. The total gold produced from seven lode mines and prospects, of which six were in Fremont County, and one in Carbon, was only 194 ounces. Counties producing placer gold, besides Fremont, comprised Albany, Carbon, Sheridan, and Teton. The total production of gold and silver (in terms of recovered metals) in Wyoming from 1867 to 1938, inclusive, according to Chas. W. Henderson, has been 76,090 fine ounces of gold and 74,297 fine ounces of silver.

Distribution of the gold and silver production of the United States, in fine ounces, for 1938, as to sources of production

[Table furnished by the Bureau of Mines]

State	Gold			Silver		
	Lode mines	Placer mines		Dry and siliceous ores [1]	Lead ores [2]	Copper ores
		Floating connected-bucket dredges	All other			
	Ounces	*Ounces*	*Ounces*	*Ounces*	*Ounces*	*Ounces*
Alabama	30		11	4		
Alaska	234,018	278,442	152,513	221,700		258,153
Arizona	300,058		4,985	2,147,133	805,957	4,525,435
California	738,616	375,296	197,217	2,525,264	18,524	47,016
Colorado	349,427	1,027	17,014	2,076,762	434,190	5,421,143
Georgia	294		578	71		
Idaho	49,434	31,234	22,845	13,838,119	5,154,218	1,339
Illinois					576	
Maryland	855			24		
Michigan						93,634
Missouri					292,000	
Montana	167,965	21,356	13,992	1,962,539	581,847	3,859,576
Nevada	283,475	63	12,896	3,441,276	473,017	437,970
New Mexico	40,424		2,626	725,305	354,461	150,094
New York					37,200	
North Carolina	1,861		17	387	206	4,907
Oregon	27,398	29,006	25,325	100,457	46	4
Pennsylvania	1,422					[3] 9,360
South Carolina	11,677		4	3,951		
South Dakota	593,778		1,069	162,295		
Tennessee	236				857	37,476
Texas	439			1,431,696	77	1,235
Utah	200,482		148	3,075,255	5,688,253	919,224
Virginia	2,886		57	415		87
Washington	72,600		1,575	238,732	17,899	124,307
Wyoming	194		604	328		
Total [4]	3,077,569	736,424	453,476	31,951,713	13,859,328	15,890,960

[1] Contains small quantity of silver from placer mines (less than 86,110 ounces).
[2] Includes silver in lead, silver-lead, zinc-lead, zinc and zinc-lead-copper ores.
[3] Includes silver in copper concentrates from magnetite-pyrite-chalcopyrite ores.
[4] Philippine Islands and Puerto Rico excluded: Philippine Islands report 1,155,057 ounces of silver from lode mines and 12,555 ounces from placers; also 853,168 ounces of gold from lode mines and 50,097 ounces of gold from placers.

Refinery production (arrivals thereat) of gold mined in the several States and Territories in 1937 and 1938, with the increase and decrease in each for the latter year

State and Territory	Production [1]				Increase 1938	Decrease 1938

[1] Value of gold in 1934 and thereafter calculated on basis of $35 per fine ounce; prior thereto on basis of $20.67+ per fine ounce.

[2] Value of silver calculated on the basis of the average amount per ounce returned to depositors of newly mined domestic silver: in 1934 at $0.64+ per fine ounce, in 1935 at $0.71875, in 1936 at $0.7745, in 1937 at $0.7735.

[3] Value of silver calculated on the basis of the amount per fine ounce returned to depositors of newly mined domestic silver produced in 1938, $0.6464+.

Gold and Silver Used in Industrial Arts in the United States During the Calendar Year 1938

Issue by the mints and assay offices of gold and silver for industrial-arts use has very substantially lessened since the monetary price of gold was fixed at $35 per fine troy ounce and a one-fourth of 1 percent charge imposed, and the supplying of industry by commercial refiners of those metals has substantially increased. Previously the principal source of gold supply to industry was the mint service institutions.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1938, with the classes of material from which they were made.

Gold and silver issued for use in the industrial arts during the calendar year 1938[1]

Item	Issued by—	Gold	Silver
		Value	*Fine ounces*
Bullion	Mints and assay offices	$214,004	210,740
Bullion in various forms	Private refiners and dealers	29,912,750	38,332,389
United States coin[2]	Banks, etc		77,344
Total		30,156,754	38,620,473
Old jewelry, plate, scraps, etc., contained in private refineries and dealers' returns, and that returned to monetary use		30,480,835	18,438,847
Net new material used in industry			20,181,626
Net return from industry		324,081	

[1] For explanation of calculation, see p. 48.
[2] Estimated; the quantity of silver is equal to 100,000 silver dollars.

Gold and silver furnished for use in manufactures and the arts, and classification of the materials used, since 1880

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases Used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations the receipt classification item of "Domestic refinery bullion" includes that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that work only old materials.

Gold and silver production estimates.—These estimates consist of arrivals at United States mints and assay offices and at privately owned refineries (bullion-producing plants), of gold and silver from mines within the States and Territories of the United States, including the production of the Philippine Islands which comes to the United States for reduction. The portion of this figure representing mint receipts is on the quantity basis.

Gold and silver consumption in industry.—These estimates comprise bar sales by the mints and assay offices for industrial use (partly estimated) plus similar items issued by private refiners, dealers (and manufacturers), as reported to the Mint Bureau, plus an estimate of domestic coin melted for industrial use; from the total of these is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net new materials consumed.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with

annual addition of new coinage and reported imports, and deduction of withdrawn coin, reported exports, and an estimate for industrial use; from 1928 to 1933 the additional factor of gold coin "earmarked," or set aside for foreign owners, was considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. After 1933 gold coin has been omitted as such; any unmelted gold coin on hand is treated as bullion. In 1928 minor coin was added, using only the 5-cent nickel and 1-cent bronze coins of the type commonly in circulation and considering only the amounts coined and those withdrawn for recoinage. The monetary stock tables for a series of years have been revised back to the establishing of the Federal Reserve System (1914) to include earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation omits the coin received for recoinage but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

Stock of Domestic Coin in the United States, June 30, 1939 [1]

On June 30, 1939, the stock of domestic coin in the United States was $1,088,037,109 as shown in the table below:

Item	Silver	Minor	Total
Estimated stock of coin in United States on June 30, 1938	$920,540,703	$157,183,351	$1,077,724,054
Coinage executed during fiscal year 1939	11,029,058	4,509,320	15,538,378
Imports, United States coin, fiscal year 1939	292,639		292,639
Total	931,862,400	161,692,671	1,093,555,071
Less:			
Exports United States coin, fiscal year 1939	10,092		10,092
United States coin withdrawn from monetary use, face amount, fiscal year 1939	4,861,731	546,139	5,407,870
United States coin used in the industrial arts, and general disappearance, estimated, fiscal year 1939	100,000		100,000
Total	4,971,823	546,139	5,517,962
Estimated stock of coin in United States, June 30, 1939	926,890,577	161,146,532	1,088,037,109

[1] For method of estimating, see p. 48.

NOTE.—The number of standard silver dollars coined to June 30, 1939, was 847,629,915, which, added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 848,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000, the net export from November 1919 to July 1920, in movement due to the high price of silver, was 28,287,142; those melted under the terms of the Pittman Act of April 23, 1918, totaled 270,232,722; those melted otherwise (mutilated, etc.) since 1883 numbered 227,992, and the number of Hawaiian dollars melted to June 30, 1939, was 455,329, a total disposition of 301,698,185, leaving in the United States on June 30, 1939, 547,078,589 standard silver dollars and 379,811,988 dollars in subsidiary silver coin.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

Fiscal year ended June 30—	Population (thousands)	Gold bullion and coin (thousands)	Silver coin [1] (thousands)	Per capita		
				Gold	Silver	Total
1873	41,677	$135,000	$18,149	$3.24	$0.44	$3.68
1874	42,796	147,379	21,092	3.44	.49	3.93

[1] For 1934 and thereafter includes silver bullion revalued to $1.29+ per fine troy ounce and set up a security against silver certificates.

[2] On Jan. 31, 1934, the weight of the gold dollar was reduced from 25.8 grains of gold nine-tenths fine to 15 5/21 grains nine-tenths fine, thereby giving gold a monetary value of $35 per fine troy ounce, which compares with the previous $20.67+ per fine troy ounce. Proclamation of Jan. 31, 1934.

Stock of Domestic Coin in the United States, December 31, 1938 [1]

On December 31, 1938, the stock of domestic coin in the United States was $1,082,362,938 as shown in the table below:

Item	Silver	Minor	Total
Estimated stock of coin in United States Dec. 31, 1937	$919,295,733	$155,798,254	$1,075,093,987
Coinage executed, calendar year 1938	8,998,493	3,719,686	12,718,179
Imports, United States coin, calendar year 1938	337,549	----------	337,549
Total	928,631,775	159,517,940	1,088,149,715
Less:			
Exports, United States coin, calendar year 1938	55	----------	55
United States coin withdrawn from monetary use, calendar year 1938, face amount	5,225,832	460,890	5,686,722
United States coin used in the industrial arts, and general disappearance, estimated, calendar year 1938	100,000	----------	100,000
Total	5,325,887	460,890	5,786,777
Estimated stock of coin in United States Dec. 31, 1938	923,305,888	159,057,050	1,082,362,938

[1] For method of estimating, see p. 48.

NOTE.—The number of standard silver dollars coined from 1878 to Dec. 31, 1938, was 847,629,915 which, added to Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 848,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000; the net export from November 1919 to July 1920 in movement due to the high price of silver was 28,287,142; those melted under the terms of the Pittman Act of Apr. 23, 1918, total 270,232,722; those melted otherwise (mutilated, etc.) since 1883 numbered 227,661, and the number of Hawaiian dollars melted to Dec. 31, 1938, was 455,329; a total disposition of 301,697,854, leaving in the United States on Dec. 31, 1938, 547,078,920 standard silver dollars and 376,226,968 dollars in subsidiary silver coin.

[1] Data for individual years published in reports of the Director of the Mint for 1931 and for prior years.

NOTE.—Net exports are shown with a prefixed minus sign. The quantities in the column "Net imports" for both gold and silver for the years 1873–74 to 1886–87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 toals, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, from 1897 to 1914 from daily London quotations, and since from daily New York quotations.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production and coinage of gold and silver and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint

Receipts of replies to the interrogatories are frequently delayed in transmission, and the available data for the calendar year under review are usually incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries the most reliable data available are used in compiling world statistics.

[1] At $35 per fine ounce of gold.
[2] At the average price of fine ounce of silver in New York, $0.45195.
[3] For year ended Mar. 31, 1938.
[4] Includes coin struck in prior years delivered in 1937.
[5] There were produced for circulation 926 silver mint bars B (of silver fineness of coin, 0.880), each bar containing the same quantity of silver as 1,000 standard silver yuan (dollars). The bars consumed 699,437 fine ounces of silver having a value (on basis of $0.45195 per fine ounce) of $316,111.
[6] Ducats.
[7] Includes coinage during 1936 not previously reported, 22,136,398 yen. The value of the silver consumed in such coin has been computed at the rate of 45.399 cents per fine ounce.

REVISIONS, 1937 MONETARY STOCKS

Principal revisions of monetary stocks for 1937, published in last year's volume, give:

Canada's paper circulation reduced from $269,782,000 to $205,135,000 to eliminate amounts held in reserve by banks of issue.

British Honduras' paper circulation reduced from $393,000 to $274,000 to eliminate amounts held in government treasury.

British Guiana's paper circulation as $1,515,000 instead of $1,386,000.

Paraguay's paper circulation as 1,241,446,000 pesos instead of 1,261,870,000 pesos.

Trinidad's gold stock as none instead of $1,000; silver stock as $132,000 instead of $111,000; paper circulation as 2,308,000 West Indian dollars instead of 2,194,000.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEAR 1938

The following compilations have been made from answers to official questionnaires of the United States Mint Bureau, central bank reports, and other official sources, except as indicated by footnote 1. It is understood that material amounts of gold are not reported by several countries, such as amounts held in secret funds for stabilizing currencies (see footnote 6) and those hoarded or held outside of regularly reported stocks. The amount of silver in circulation in many countries is not obtainable.

Population figures are principally from the Statistical Yearbook of the League of Nations, 1938–39.

Monetary stock of principal countries of the world, end of calendar year 1938 (subject to revision)

Stated in United States money (000 omitted), except paper circulation, which is stated in monetary unit of issuing country (000 omitted). $1=15\frac{5}{21}$ grains of gold 9/10 fine; i. e., an ounce of fine gold=$35. Population (000 omitted)

Country	Monetary unit			Gold stock (conversions to United States equivalent at legal parity except as indicated by footnotes)			Monetary silver stock in government treasuries, in banks, and, when data available, in circulation (United States equivalent of reported face amount at exchange rate)	Paper circulation in monetary unit of issuing country	Population	Per capita		
	Name	United States equivalent		In central bank, government treasuries, and earmarked abroad	Other	Total gold stock				Gold	Silver	Paper
		On gold basis as defined by laws effective Dec. 31, 1938, insofar as known	At average exchange rate during December 1938 [2]

[2] Exchange rates have been given insofar as obtainable; in some cases they are nominal.

[3] Includes silver bullion.

[4] Continental United States only.

[5] Bases used for conversions of gold holdings to United States dollars:
Canada, holdings of Government Treasury converted at legal parity; holdings of Bank of Canada reported at current market rate.
Ecuador, revaluation of June 13, 1936, at rate of 11.6466 sucres per gram of fine gold (United States equivalent, $0.0966).
Finland, revaluation of Dec. 22, 1938, at the rate of 50,000 marks per kilogram of fine gold (United States equivalent $0.0225).
France, gold holdings of the Bank of France revalued by decree of Nov. 12, 1938, at 27.5 milligrams of gold 0.900 fine (United States equivalent, $0.027851).
Japan, gold revaluation effective Aug. 25, 1937, at 0.29 gram fine gold per yen (United States equivalent, $0.32633).
Latvia, revaluation of Jan. 1, 1937, on the basis of the price of gold in terms of sterling in London (25.22 lats=£1 sterling) (United States equivalent, $0.1960).
Rumania, revaluation of Nov. 6, 1936, at the rate of 153,333.33 lei per kilogram of fine gold (United States equivalent, $0.0073).
Switzerland, revalued in September 1936, at 0.215 gram of fine gold per franc (United States equivalent, $0.2419).

[6] Gold held in "Exchange equalization funds" not included in above amounts:
United States (December 1938), $80,410,865.
Per Statistical Year Book League of Nations, 1938–39:
Belgium, amount unknown.
France (December 1938), at $35 per ounce, $367,408,000.
United Kingdom (September 1938), at $35 per ounce, $758,520,000.
Switzerland (June 1937), at $35 per ounce, $123,598,000.

[7] Colombia, law of Nov. 19, 1938, established new gold content of peso at 0.507816 gram of fine gold (United States equivalent, $0.5714).
France, law of Oct. 1, 1936, provided for new gold content of franc to be fixed within limits of 43 and 49 milligrams of gold 0.900 fine. This law was superseded by decree of June 30, 1937, which stated that gold content of the franc shall be fixed ultimately by a decree adopted by the Council Ministers. Until issuance of such decree a stabilization fund shall regulate the relationship between the franc and foreign currencies.
Indochina, French, monetary unit, the piaster, has a par value of 10 French francs.
Latvia, law of Sept. 28, 1936, pegged the lat to sterling at 2,522 lati to £100.
Mexico, decree of Aug. 28, 1936, left the monetary unit the peso, to be later defined by law.
Switzerland, order of Federal Council enacted Sept. 27, 1936, instructed the Swiss National Bank to maintain the gold parity of the Swiss franc at a value ranging between 190 and 215 milligrams of fine gold.
Syria, monetary unit, the Syrian pound, has a par value of 20 French francs.
Uruguay, monetary unit, the peso, established by monetary law of Jan. 12, 1938, at 0.585018 gram of pure gold (United States equivalent, $0.6583).

[8] Includes base metal coin.

[9] Average exchange rate for 1938.

[10] Prior years' figures at new equivalents where equivalents other than the legal parity are applicable.

[11] Including silver.

[12] United States coin and currency also circulate.

[13] Silver in circulation not included.

[14] United States currency is circulating media.

[15] Net issues of silver coin.

[16] Exclusive of Canadian bank notes which are the principal circulating media.

[17] Gold and silver.

[18] On June 30, 1938.

[19] Australian coins and notes are the circulating media.

[20] Exclusive of British coins and currency which still circulate in Erie.

[21] Spanish bank notes and coin also circulate.

[22] Includes 541,978 British sterling converted to escuados at 111.89 to the pound.

[23] Indochina notes are the circulating media.

[24] Includes notes in circulation in Northern Rhodesia and in Nyasaland.

WORLD PRODUCTION OF GOLD AND SILVER

[The production figures given below are based upon the unpublished data, principally interrogatory replies, in the files of the Bureau of the Mint]

[1] Average price per fine ounce in New York.
[2] Estimate based on imports of ore and bullion into United States and Great Britain and interrogatory data.
[3] Estimate based on other years' production.
[4] Prior years' figures.
[5] Fiscal year ended June 30.
[6] Conjectural.
[7] Amount exported.
[8] Including production for Portugal.
[9] Incomplete.
[10] Data from Year Book of the American Bureau of Metal Statistics.
[11] United States Bureau of Mines.
[12] Including Burma.
[13] Including Austria.
[14] Including Manchuria.

Production of gold and silver in the world since the discovery of America

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint]

Period	Gold				Silver				Percentage of production			
	Annual average for period		Total for period		Annual average for period		Total for period		By weight		By value	
	Fine ounces	Value	Fine ounces	Value [1]	Fine ounces	Commercial value [1]	Fine ounces	Commercial value [2]	Gold	Silver	Gold	Silver
1493–1520	186,470	$3,855,000	5,221,160	$107,931,000	1,511,050	$2,085,249	42,309,400	$58,386,972	11.0	89.0	64.9	35.1

[1] Valued, prior to 1934, at $20.67+ per fine ounce; 1934 and thereafter, at $35 per fine ounce.

[2] Valued, prior to 1701, at $1.38 per fine ounce, which corresponds with a commercial ratio of silver to gold of approximately 15 to 1, the ratio which prevailed for over 100 years subsequent to 1687, as per tabulation elsewhere in this volume. From 1701 to 1840 the value corresponds with the average ratios of silver to gold as per the tabulation elsewhere in this volume. From 1841 the annual averages per fine ounce in London are used except for the years 1915 to 1921, and 1931 to 1937, when New York prices are used. Tabulations of silver quotations appear elsewhere in this volume.

Production of gold and silver in the world since the discovery of America—Continued

Period	Gold				Silver				Percentage of production			
	Annual average for period		Total for period		Annual average for period		Total for period		By weight		By value	
	Fine ounces	Value	Fine ounces	Value	Fine ounces	Commercial value	Fine ounces	Commercial value	Gold	Silver	Gold	Silver
1901–1905	15,606,730	$322,619,800	78,033,650	$1,613,099,100	167,995,408	$95,942,178	839,977,042	$479,710,888	8.5	91.5	77.1	22.9

REPORT OF THE DIRECTOR OF THE MINT ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1938

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 3, 1938.

SIR: In compliance with the provisions of section 253, title 31, U. S. Code, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1938, being the Sixty-sixth Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1937.

OPERATION OF THE MINTS AND ASSAY OFFICES

Institutions of the Mint Service

During the fiscal year ended June 30, 1938, seven mint institutions were in operation: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which handles the major portion of the gold imported and exported; gold bullion depository at Fort Knox, Ky.; mint at New Orleans, conducted as an assay office; and assay office at Seattle. The two last-named institutions are, in effect, merely bullion-purchasing agencies and also serve the public by making assays of ores and bullion. Electrolytic refineries are maintained at the New York, Denver, and San Francisco institutions.

Coinage

Domestic coin manufactured during the fiscal year amounted to 540,375,283 pieces, as compared with 760,915,737 pieces during the preceding year when the output was the largest of any fiscal year in the history of the Government. As in previous years, the coin most largely produced was the one-cent piece. The production in 1938, in amount, $26,610,910, consisted of 111,754,358 subsidiary silver coins, $19,854,941; 61,744,005 nickel coins, $3,087,200; and 366,876,920 bronze coins, $3,668,769.

Coinage for foreign governments amounted to 18,392,444 pieces, compared with 42,550,000 pieces during the prior year. The foreign coinage consisted of 8,672,348 silver, nickel, and bronze coins for Honduras, Nicaragua, and Colombia, made at Philadelphia, and 9,720,096 silver coins for China, made at San Francisco.

The grand total of domestic and foreign coins made in 1938 amounted to 558,767,727 pieces, a decrease of 244,698,010 pieces over that of the prior year.

Bullion Deposit Transactions

The number of bullion deposit transactions during the year totaled 56,005, including 298 inter-mint-service transactions. The deposit transactions required 85,187 assay determinations, which compares with 97,293 assay determinations during the prior year.

Gold Operations

Gold acquisitions by the mints and assay offices during the year amounted to $1,129,033,865.49; receipts from other Treasury offices of domestic and foreign coin melted during the year amounted to $1,358,071.81; and transfers between mint-service institutions amounted to $79,970,670.53. These transactions total $1,210,362,607.83, compared with $7,759,425,211.99 for the prior year.

The acquisitions include $1,028,668.49 of gold received at $20.67+ per fine ounce. The increment on this gold amounted to $713,015.63.

Silver Operations

The Government's acquisitions of silver during the year totaled 406,661,895 fine ounces, at an average cost of 49.8+ cents per fine ounce and a total cost of $202,740,642. The acquisitions consist of the following:

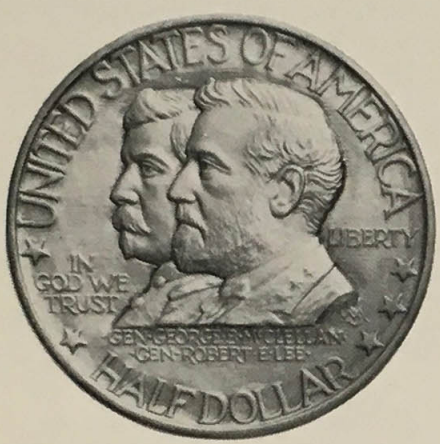
Item	Amount (fine ounces)	Cost
Newly mined domestic silver	68,715,543	$51,341,249
Nationalized silver	17,351	8,677
Purchase Act silver	337,225,185	151,082,730
Silver contained in gold bullion deposits, etc	415,082	181,807
Silver received in exchange for Government stamped bars	288,734	126,179
Total	406,661,895	202,740,642

United States coin received for recoinage totaled 3,641,169 fine ounces, with a recoinage value of $5,033,584. Silver deposited by other governments, for foreign coinage, totaled 725,250 fine ounces. Silver transfers between mint-service institutions totaled 1,325,932 fine ounces. These items plus the silver acquired during the year brought the total transactions in silver to 412,354,246 fine ounces, compared with the prior year's total of 254,696,986.

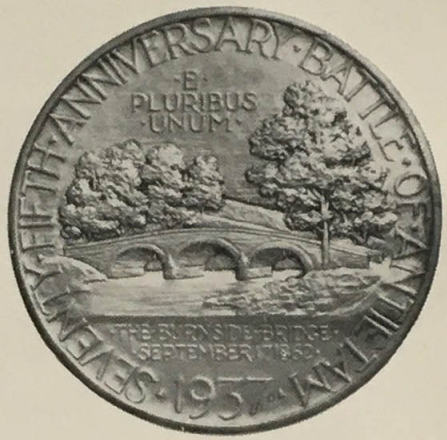
During the year 1938, $201,967,413 of silver certificates were issued against 156,209,171 fine ounces of silver bullion valued at $1.29+ per fine ounce, the statutory monetary value of silver. Such silver had been acquired at an average price of 58.3+ cents per ounce. The difference between the cost of the silver held to secure such certificates and the monetary value of such silver is $110,870,809 and this amount constitutes seignorage.

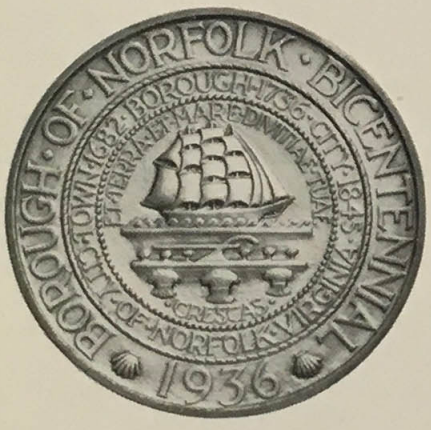
The open-market price of silver in New York (mean of bid and asked) during the fiscal year 1938 averaged $0.44537. The highest point was $0.45062, which prevailed from July 1, 1937, to March 25, 1938, with $0.44062 on March 28th and $0.43062 during the remainder of the fiscal year.

For newly mined domestic silver a return to the depositor of $0.7757+ per fine ounce, established by the President's proclamation



1





2

COMMEMORATIVE HALF DOLLARS.

1. ANTIETAM, MD., BATTLE OF, 75TH ANNIVERSARY.
2. NORFOLK, VA., FOUNDING ANNIVERSARIES.

of April 24, 1935, prevailed until the end of December 1937, after which the return was $0.6464+ established by proclamation of December 30, 1937. The latter rate prevailed during the remainder of the fiscal year.

Refineries

The electrolytic refineries produced during the year 3,079,343 fine ounces (105.6 tons) of electrolytically refined gold bullion, and 1,605,294 fine ounces (55.0 tons) of silver bullion. During the prior year the quantities produced were 3,351,715 fine ounces (114.9 tons) of gold and 1,641,602 fine ounces (56.3 tons) of silver.

The electrolytic refineries at the Denver and San Francisco mints remained closed most of the year because of other more urgent activities.

Stocks of unrefined gold and silver bullion in mint institutions increased during the fiscal year 1938 by approximately 274 tons, to 1,589 tons. The increase in 1937 was about 250 tons.

Commemorative Coins

Commemorative half dollars, bearing special designs relating to historic events, were issued during the fiscal year 1938, as follows:

Commemorative coins (half dollars) issued during the fiscal year 1938

Occasion commemorated	Date of law	Pieces
Antietam, battle of, seventy-fifth anniversary	June 24, 1937	50,000
Norfolk, Va., three hundredth anniversary of original land grant and two hundredth anniversary of the establishment of the city of Norfolk as a borough	June 28, 1937	25,000

The Antietam coin obverse carries accolated portraits of Gens. Geo. B. McClellan and Robert E. Lee while the reverse bears a likeness of the Burnside Bridge and the date of the battle of Antietam. The design is by Wm. Marks Simpson.

The Norfolk coin, also designed by Wm. Marks Simpson, bears on the obverse the official seal of the city of Norfolk—a ship, plow, shocks of grain, Latin wording—and in a border and an inner border wording appropriate to the occasion commemorated. On the reverse, in center, vertically, is a mace, and horizontally the year 1636 between floral sprays; above are the words Norfolk—Virginia and Land—Grant.

Other data on the two coins are those required by law.

Stock of Coin and Monetary Bullion in the United States

On June 30, 1938, the estimated stock of domestic coin in the United States was $1,077,724,054, of which $547,079,218 was standard silver dollars, $373,461,485 subsidiary silver coin, and $157,183,351 minor coin.

The stock of gold bullion, including coin, held in the Treasury on the same date was valued at $12,962,953,931, an increase of $644,682,766; and the stock of silver bullion was 1,678,532,406 fine ounces, an increase of 395,043,598.

Production of Gold and Silver

Domestic gold production during the calendar year 1937 was 4,804,540 fine ounces with a monetary value of $168,158,900 compared with 4,357,394 fine ounces with a monetary value of $152,508,800 in 1936. The quantity output was about 98 percent of that for the record year 1915, when the total was 4,887,604 fine ounces.

Domestic silver production during the calendar year 1937 totaled 71,941,794 ounces. This compares with 63,812,176 ounces for 1936, and with the record production of 74,961,075 fine ounces for 1915.

Industrial Consumption of Gold and Silver

Gold consumption in the industrial arts during the calendar year 1937 is estimated at $39,622,338. Gold returned from industrial use amounted to $36,407,945, leaving $3,214,393 as net industrial consumption of new gold, which compares with an excess return from industry of $2,907,833 during the previous year.

Silver used in the arts is estimated at 51,292,270 fine ounces, of which 27,727,284 fine ounces was new material.

Compared with the prior year, there was an increase in gold consumption of approximately 190,000 ounces, and an increase in silver consumption in industry of about 15,500,000 ounces.

Mint Buildings

The silver bullion depository, constructed on a site formerly included in the military reservation at West Point, was completed during the fiscal year 1938. It will be operated as an auxiliary of the New York assay office. It will be occupied at once for the storage of silver bullion previously temporarily placed in the assay office at New York, the old assay office building at New York, the subtreasury building, and in rented vaults.

Additional vaults for silver storage are under construction at the new San Francisco Mint, which was first occupied during the previous fiscal year.

Appropriations, Expenses, and Income

Regular appropriations available for the mint service during the fiscal year 1938 totaled $1,353,560; the appropriation for meeting emergency expenses amounted to $1,120,000; the deficiency act of March 5, 1938, provided funds for silver movements (totaling $110,700, available during the two fiscal years 1938 and 1939) of which $17,360 were obligated in 1938; and reimbursements to appropriations for services rendered amounted to $167,837, making a total of $2,658,757.

Expenses amounted to $2,720,123, of which $2,618,125 was chargeable to appropriations and $101,998 chargeable to income.

The regular income realized by the Treasury from the mint service aggregated $18,676,153, of which $15,216,162 was seigniorage. The seigniorage on subsidiary silver coin was $9,852,612, and on minor coin $5,363,550. Extraordinary income aggregated $111,583,825, of which $110,870,809 was seigniorage on silver bullion revalued to $1.29+per ounce, and $713,016 was the increment to $35 per ounce on revalued gold.

BULLION DEPOSITORY, WEST POINT, N. Y.

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1938, and number of employees on June 30, 1938, at each institution are shown in the following table:

Deposits of gold and silver, income, expenses, and employees, by institutions, fiscal year 1938

Institution	Number of bullion deposit transactions	Number of assay determinations on bullion deposits	Monetary value of gold and silver receipts including transfers [1]	Gross regular income	Gross expenses	Excess of income (+) or of expenses (−)	Employees, June 30, 1938
Philadelphia	8,420	12,554	$57,000,127	$12,530,547	$1,043,979	+$11,486,568	382

Coinage by the United States for Other Countries

The coinage for other countries during the same period totaled 18,392,444 pieces, as compared with 42,550,000 pieces during the prior fiscal year, as follows:

Country	Philadelphia	San Francisco	Total
	Pieces	*Pieces*	*Pieces*
Silver:			
China		9,720,096	9,720,096
Honduras	2,500,000		2,500,000
Total silver	2,500,000	9,720,096	12,220,096
Nickel:			
Colombia	3,872,348		3,872,348
Nicaragua	300,000		300,000
Total nickel	4,172,348		4,172,348
Bronze:			
Nicaragua	2,000,000		2,000,000
Total bronze	2,000,000		2,000,000
Total coinage	8,672,348	9,720,096	18,392,444
Prior fiscal year, total coinage	42,550,000		42,550,000

Mint Issue of Fine Gold Bars for Industrial Use

[On value basis; see p. 48]

The value of the fine gold bars issued for industrial use, in exchange for cash, by the United States mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1938, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1937:		1938—Continued.	
July	$42,691.03	February	$23,779.30
August	40,507.57	March	19,151.77
September	22,226.29	April	20,881.92
October	30,990.36	May	15,425.61
November	20,529.04	June	27,013.97
December	36,776.55

Receipts and Disbursements of Gold Bullion and Balances on Hand

Receipts and disbursements of gold bullion during the fiscal year 1938, and balances on hand June 30, 1938, as compared with June 30, 1937, are shown in the following table:

Institution	Balance on hand June 30, 1937	Receipts during fiscal year 1938 (details below)[1]	Total	Disbursements during fiscal year 1938 (details below)[1]	Balance on hand June 30, 1938
Philadelphia	$54,419,167.42	$5,154,185.77	$59,573,353.19	$54,346,590.10	$5,226,763.09
San Francisco	255,154,241.51	382,675,359.77	637,829,601.28	72,034.01	637,757,567.27
Denver	3,765,567,972.46	61,574,313.64	3,827,142,286.10	23,594.41	3,827,118,691.69
New York	2,714,965,248.45	682,529,233.54	3,397,494,481.99	431,195,815.51	2,966,298,666.48
New Orleans	407,841.21	1,014,387.42	1,422,228.63	1,250,165.85	172,062.78

[1] Includes transfers.

Minor Coins Outstanding

The following statement shows the coinage of minor coins, by denominations, the amount on hand at the mints, issued, melted, and outstanding June 30, 1938. Minor coins were first manufactured at the Philadelphia Mint in 1793, at the San Francisco Mint in 1908, and at the Denver Mint in 1911.

Item	Coined	On hand at mints unissued	Issued	Melted	Amount issued and outstanding June 30, 1938
Copper half cents [1]	$39, 926. 11		$39, 926. 11	$1. 84	$39, 924. 27
Copper cents	1, 562, 887. 44		1, 562, 887. 44	383, 528. 79	1, 179, 358. 65
Copper-nickel cents	2, 007, 720. 00		2, 007, 720. 00	809, 084. 77	1, 198, 635. 23
Bronze cents	72, 468, 152. 72	$1, 940, 580. 42	70, 527, 572. 30	1, 695, 056. 80	68, 832, 515. 50
Bronze 2 cents	912, 020. 00		912, 020. 00	343, 899. 50	568, 120. 50
Nickel 3 cents	941, 349. 48		941, 349. 48	287, 878. 26	653, 471. 22
Nickel 5 cents	97, 152, 097. 70	1, 413, 422. 40	95, 738, 675. 30	10, 741, 796. 80	84, 996, 878. 50
Total	175, 084, 153. 45	3, 354, 002. 82	171, 730, 150. 63	14, 261, 246. 76	157, 468, 903. 87

[1] There is no record of the melting of the old copper half cents, but it is believed that few, if any, are now in circulation.

Proof Bullion (1.000 fine)

In order to maintain uniformity in assay of bullion in the offices of the mint service, all proof gold and proof silver are made at one institution and furnished to other institutions when required. Proof gold is made at the New York Assay Office, while the Philadelphia Mint makes proof silver. During the fiscal year 1938 there was furnished other mints and assay offices 292 ounces of proof gold and 305 ounces of proof silver.

Operations of the Melting and Refining and of the Coining Departments, Fiscal Year 1938

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1937, was 35.6 million fine ounces of gold and 68.1 million fine ounces of silver. There were also operated upon at the coinage mints 121.2 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative offices, as prescribed in section 355, title 31, United States Code, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

Bullion Gains and Losses

The net gains from operations on gold and silver bullion during the fiscal year 1938 amounted to $251,189.90, as follows:

Item	Mint at—			Assay office at New York	Minor assay offices	Total
	Philadelphia	San Francisco	Denver			
Recovered from refining and coining operations	$22,422.65	$97,360.75	$12,718.88	$77,455.13	----------	$209,957.41
Recovered incident to receipt of bullion deposits	6,204.75	6,738.16	8,046.95	13,770.28	$7,878.56	42,638.70
Gains on lightweight and mutilated coins received for recoinage	29.18	21.50	30.65	.99	----------	82.32
Gain on bullion shipments (net)	6.82	----------	----------	----------	1,376.86	1,383.68
Total gains	28,663.40	104,120.41	20,796.48	91,226.40	9,255.42	254,062.11
Wasted in refining and coining operations	1,783.45	1,033.97	54.79	----------	----------	2,872.21
Net gains	26,879.95	103,086.44	20,741.69	91,226.40	9,255.42	251,189.90

Wastage of Coinage Metal and Loss on Sale of Sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1938, was $10,610.99. A loss of $4,316.87 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the following table:

Item	Mint at—			Assay office at New York	Total
	Philadelphia	San Francisco	Denver		
Silver wastage: Coining department	$1,783.45	$1,033.97	$54.79	----------	$2,872.21
Nickel wastage:					
Melting and refining department	2,020.44	5.80	139.20	----------	2,165.44
Coining department	101.60	1.01	14.75	----------	117.36
Bronze wastage:					
Melting and refining department	4,865.33	49.94	50.86	----------	4,966.13
Coining department	470.91	11.63	7.31	----------	489.85
Loss on sale of sweeps	----------	208.33	2,723.32	$1,385.22	4,316.87
Total wastage and loss	9,241.73	1,310.68	2,990.23	1,385.22	14,927.86
Reimbursements:					
Nickel and bronze wastage on domestic coin, from minor coinage profits	6,538.77	68.38	212.12	----------	6,819.27
Silver departmental wastage offset by other departmental surpluses	1,783.45	1,033.97	54.79	----------	2,872.21
Other wastages and loss on sweeps, from appropriations	919.51	208.33	2,723.32	1,385.22	5,236.38
Total reimbursements	9,241.73	1,310.68	2,990.23	1,385.22	14,927.86

Employees

The total number of officers and employees of the mint service on June 30, 1938, was as follows:

Institution	Established under act of—	Employees, by departments					Total	
		General	Engraving	Assaying	Coining	Melting and refining	June 30, 1938	June 30, 1937
Bureau of the Mint	Feb. 12, 1873	47					47	47

[1] Conducted as an assay office since 1910.
[2] Allotment made from a lump construction appropriation.

Assay Commission's Annual Test of Coin

Section 363, title 31, United States Code, provides for an annual test of the domestic coinage executed during each calendar year by a commission, of which part are ex-officio members, the others being appointed, without compensation, by the President. The purpose is to secure a due conformity in the silver coins to their respective standards of fineness and weight. The Commission, which met at the Philadelphia Mint, February 9, 1938, reported the following results of their examination of the 1937 coinage:

In accordance with section 3539 of the Revised Statutes, your committee on counting reports that the packages containing the pieces reserved by the several mints for the trial of coins were delivered to us by the superintendent of the mint at Philadelphia, and upon comparison with the transcripts kept by the Director of the Mint were found to be correct. A liberal number of packages were selected from the deliveries of each month of all denominations coined, and the coins contained therein were counted and found to agree with the number called for in each package.

The committee on assaying has completed the assays on samples taken from different lots of coin representing all denominations coined during the year 1937 by the United States mints at Philadelphia, San Francisco, and Denver.

No gold was coined at any of the mints during the year 1937.

The result of the assays upon coins and mass melts made from coins is satisfactory, being well within legal limits of tolerance, which is three one-thousandths for silver coins.

The highest and lowest assays on individual silver coins selected were as follows:

	Thousandths
Highest assays on individual silver coins:	
Philadelphia Mint	900. 0
Denver Mint	900. 2
San Francisco Mint	900. 4
Lowest assays on individual silver coins:	
Philadelphia Mint	898. 6
Denver Mint	898. 9
San Francisco Mint	898. 6
Mass melts:	
Philadelphia Mint	899. 3
Denver Mint	899. 3
San Francisco Mint	899. 3

The committee on weighing reports that it received from the committee on assaying the residues of the several parcels of reserved coins, and took therefrom at random such a number of pieces of each of the denominations represented and so distributed by dates of coinage as seemed to be sufficient for the purposes of weighing. Accordingly, 218 pieces were selected for weighing. These coins have been severally weighed by the committee and their respective weights ascertained to an accuracy of 0.01 grain, and the results recorded. It will be noted that every coin weighed was within the deviation allowed by law.

The coins were directly weighed against a set of sealed coin weights, supplemented by a set of grain weights, delivered to the commission from the Bureau of Standards, Washington, D. C., in sealed packages, and accompanied by certificates signed by the Director of the Bureau. The weighings were made on a Troemner balance, an even arm analytical balance, which was tested for sensitiveness and equality of arms, and found to be satisfactory for the purpose.

The maximum deviation from the standard, of the heaviest and the lightest coins of each denomination from each mint, is shown in the following table:

Item	Legal deviation allowed	Philadelphia		San Francisco		Denver	
		Heavy	Light	Heavy	Light	Heavy	Light
Silver coin:	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1938, is respectfully submitted.

NELLIE TAYLOE ROSS,
Director of the Mint.

Hon. HENRY MORGENTHAU, Jr.,
Secretary of the Treasury.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1937

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1937

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1937 is estimated to have been 4,804,540 fine ounces, valued at $168,158,900, and the production of silver is estimated at 71,941,794 fine ounces, valued at $55,646,978. A comparison of these figures with those of 1936 indicates about 447,000 fine ounces increase in production of gold and approximately 8,130,000 ounces increase in silver production.

The largest gold-producing State, California, made the largest increase in 1937, about 121,000 ounces, to a total output of about 1,169,000 ounces. Other large increases were made by Alaska, 111,000 ounces; Utah, 79,000; Arizona, 26,000; Washington, 21,000; Montana, 20,000 ounces. The Philippine Islands, with a 1937 increase of about 95,000 ounces and total product of over 597,000 ounces, exceeded all of the States in gold production except California. For the first time in 3 or 4 years some of the States had substantial decreases, these being Nevada with more than 14,000 ounces and South Dakota with more than 13,000 ounces.

Silver production also increased in most of the large silver-producing States. Idaho, with an increase of over 4,700,000 ounces, had a total output of nearly 19,600,000 ounces. The second largest producer, Utah, with an increase of 1,500,000 ounces, had a total production of nearly 12,700,000 ounces. Other States with large increases were Arizona, nearly 1,000,000; and California, about 800,000 ounces. The only considerable silver decrease, 450,000 ounces, was made by Nevada.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows. The production figures therein differ, as explained above, from the Bureau of the Mint production estimates. Further information concerning same can be obtained by those interested by addressing the Bureau of Mines at Washington.

ALASKA

The production of gold from ores and gravels of Alaska in 1937 was 627,940 fine ounces, valued at $21,977,900, compared with 540,580 fine ounces valued at $18,920,300 in 1936, according to Chas. W. Henderson, of the United States Department of the Interior, Bureau of Mines. There are no smelters or refineries in Alaska; the bulk of the gold produced in 1937 was in the form of bullion and dust sent to the United States mints and assay offices either direct or through banks and bullion buyers located at the large centers throughout Alaska. The rest was contained in high-grade ores and concentrates sent to the Tacoma (Wash.), Selby (Calif.), and Midvale (Utah) smelters.

Floating connected-bucket dredges accounted for 41 percent of the gold production in 1937. Much the largest producer from this source was the United States Smelting, Refining and Mining Co., operating five floating connected-bucket dredges, with auxiliary hydraulic and drift mining in the Fairbanks (part of the Tanana) district; and three floating connected-bucket dredges with auxiliary equipment in the Nome district. Other producers of a notable quantity from floating connected-bucket dredges were: Arctic Circle Exploration, Inc., Fairhaven district; Alluvial Gold, Inc., C. J. Berry Dredging Co., and Gold Placers, Inc., in the Circle district; and the New York Alaska Gold Dredging Corporation in the Tuluksak-Aniak district.

Placer mines worked by hydraulicking, dry-land dredges, and draglines with portable washing plants, drift mining, and sluicing produced 22 percent of the gold output of Alaska in 1937. The Yukon River Basin region, which includes the Tanana, Circle, Iditarod, Koyukuk, and Eagle districts, was the largest contributor from this source.

Gold produced from lode mines comprised 37 percent of the total output from Alaska in 1937. The Alaska Juneau Gold Mining Co., operating at Juneau, produced over 60 percent of the total lode gold output in 1937. The Alaska Juneau Gold Mining Co. moved from "mine to mill" 4,442,760 tons of rock of which 2,191,681 tons of "coarse-tailings" were rejected by hand sorting; the average tenor of the rock from "mine to mill" was 0.0441 ounce of gold to the ton. During 1937, 2,251,079 tons of ore were "fine milled," from which the gold recovery per ton was 0.0594 ounce in bullion and 0.0080 ounce in galena concentrates. Other important producers from this source were: Chichagoff Mining Co. and Hirst-Chichagof Mining Co. in Southeastern Alaska; Alaska-Pacific Mines, Inc. (leased to the Wasilla Mining Co. late in 1937), Fern Gold Leasing Co. and Willow Creek Mines, Inc., in the Cook-Inlet region; and the Nabesna Mining Corporation in the Copper River region.

The output of silver, 494,340 fine ounces, valued at $382,372, was produced as a byproduct of the gold and copper mining in 1937. Over one-half of the total silver output was contained in copper ore and concentrates produced in the Copper River and Southeastern Alaska regions. The rest was contained in the gold bullion, amalgam, and dust produced from placer and lode gold mines throughout the Territory.

ARIZONA

The production of gold, silver, copper, lead, and zinc in Arizona in 1937 was valued at $90,855,562, the largest since 1929, when the value amounted to $155,567,133, and an increase of $32,859,489 over 1936, according to C. N. Gerry and Paul Luff, of the Bureau of Mines, United States Department of the Interior. The increase in the value of the copper in 1937 was nearly $31,000,000. The production of gold in 1937 (332,694 fine ounces) and the production of silver in 1937 (9,422,552 fine ounces) were the largest ever recorded in the State and the output of copper, lead, and zinc increased considerably over 1936.

The recoverable gold output from lode and placer mines in Arizona in 1937 was 332,694 fine ounces compared with 322,408 fine ounces in 1936. Gold recovered from copper ore increased to 176,904 ounces in 1937, and gold recovered from zinc-lead ore increased to 17,098 ounces, but gold from siliceous ores decreased to 131,941 ounces.

Gold from lode mines was 328,295 ounces in 1937, an increase from 315,921 ounces in 1936, and gold from placers was 4,399 ounces, a decrease from 6,488 ounces. Nearly 55 percent of the gold from placers in 1937 was recovered by a floating dredge equipped with dragline on Lynx Creek 15 miles northeast of Prescott. Gold in bullion from ore and old tailings treated by amalgamation or cyanidation increased from 59,940 ounces in 1936 to 63,458 ounces in 1937. More than 90 percent of the gold from this source came from mines at Oatman, Gold Road, and Katherine, in Mohave County. Gold recovered from crude ore in 1937 was 152,485 ounces compared with 147,483 ounces in 1936, and gold recovered from concentrates was 110,428 ounces compared with 108,498 ounces in 1936. A large increase in gold from gold ore was made in 1937 at the Gold Road mine of the United States Smelting, Refining & Mining Co. and the new 300-ton cyanidation mill of the company was active nearly all year. Gold from copper ore increased, chiefly from the Denn, United Verde, and Magma mines. The largest producers of gold in Arizona in 1937 were the United Verde at Jerome, Copper Queen at Bisbee, New Cornelia at Ajo (all operated by the Phelps Dodge Corporation), Gold Road near Oatman, Tom Reed at Oatman, Gold Standard at Katherine, Tennessee-Schuylkill at Chloride, Magma at Superior, Octave at Octave, Hillside north of Hillside, Mammoth-St. Anthony near Mammoth, Denn at Bisbee, Eagle-Picher at Ruby, and Iron King at Humboldt. The output of gold from the Warren (Bisbee) district, Cochise County, one of the most important copper-producing districts in the State, decreased slightly from 69,707 ounces in 1936 to 69,535 ounces in 1937.

The recovered silver output in Arizona was 9,422,552 ounces in 1937, an increase from 8,386,043 ounces in 1936. The value of the output in 1937 was $7,288,344, an increase from $6,494,990 in 1936. Most of the silver in 1937—6,204,670 ounces—was recovered from crude smelting ore, 3,064,430 ounces were recovered from concentrates, and 92,275 ounces from gold and silver mills. In 1936 crude smelting ore supplied 5,794,149 ounces, concentrates 2,487,943 ounces, and gold and silver mills 103,061 ounces. More than 5,865,000 ounces of silver were recovered in 1937 from copper ore from the Copper Queen branch at Bisbee, United Verde at Jerome, Magma at Superior, and New Cornelia at Ajo. Silver recovered from copper ore increased to 6,439,270 ounces in 1937; 1,925,231 ounces were recovered from siliceous ore,

831,027 ounces from zinc-lead ore, 224,837 ounces from lead ore, and 1,538 ounces from lead-copper ore and zinc ore. The leading producer of silver in 1937 was the Phelps Dodge Corporation operating the Copper Queen, United Verde, and New Cornelia properties. Other large producers of silver in 1937 were the Eagle-Picher property at Ruby, Magma at Superior, Veta Mines, Inc. near Duncan, Denn at Bisbee, Reymert near Superior, Keystone near Chloride, Tennessee-Schuylkill at Chloride, Hillside north of Hillside, Tombstone Development Co. at Tombstone, and Arizona Magma at Chloride. The output of silver from the Warren (Bisbee) district in Cochise County increased from 3,177,135 ounces in 1936 to 3,491,735 ounces in 1937. There were 888 producing lode mines and 376 placer mines in Arizona in 1937 compared with 847 lode mines and 787 placer mines in 1936.

CALIFORNIA

California continued to maintain its position as the leading gold producer in 1937; its output exceeded that of the Philippine Islands, South Dakota, and Alaska, according to Charles White Merrill of the United States Department of the Interior, Bureau of Mines. The quantity of gold produced in 1937 exceeded that for any year since 1883 and its value was greater than that of any year since 1861. Although the data of gold production prior to 1901 did not segregate lode and placer gold, it appears certain that more lode gold was produced in 1937 than in any year of the State's history. Placer gold production during 1937 is known to have exceeded any year since 1900, and it appears to have exceeded that for any year since unrestricted hydraulic mining flourished over 50 years ago.

The output of gold from California ores, gravels, and retreated tailings in 1937 was 1,174,578 fine ounces valued at $41,110,230, compared with a production of 1,077,442 fine ounces valued at $37,710,470 in 1936; the increase in both quantity and value was 9 percent. Lode mines produced 702,272 ounces of gold valued at $24,579,520, and placer mines produced 472,306 ounces of gold valued at $16,530,710. Lode mines accounted for 60 percent and placer mines 40 percent of the total gold production in 1937, compared with a division of 62 and 38 percent, respectively, in 1936. The production of lode gold increased only 5 percent in 1937 compared with 1936, but the production of placer gold increased 15 percent. Of the gold derived from lode operations 95 percent was recovered from dry gold ore. Of the remaining 5 percent, most of it resulted from the treatment of dry gold-silver and copper ores. The predominance of free-milling gold ore in California is brought out by the fact that 53 percent of the lode gold was recovered by amalgamation; cyanidation of sands, slimes, old tailings, and concentrates accounted for 25 percent; smelting of ore 1 percent; and the smelting of concentrates the remaining 21 percent.

Dredging was the leading method of working placer deposits, both in point of yardage of gravels treated and quantity of placer gold recovered. Floating dredges of the connected-bucket type handled 94,809,000 cubic yards of gravel and recovered 322,961 ounces of gold valued at $11,303,635, or 68 percent of the placer gold produced in the State in 1937. Dragline dredges (those having floating washing plants to which gravel was delivered by a dragline type of power shovel) handled 19,364,000 yards of gravel, which yielded 94,142

ounces of gold valued at $3,294,970. Non-floating washing plants, to which gravel was delivered by mechanical means, treated 2,338,000 yards of gravel and recovered 17,079 ounces of gold valued at $597,765. Hydraulic mines accounted for the production of 4,628 ounces of gold valued at $161,980, derived from 1,324,000 yards of gravel; 98,000 yards of gravel from drift mines, were treated with a recovery of 7,398 ounces of gold valued at $258,930. Small-scale hand methods, including small sluice boxes, long toms, pans, rockers, and dry washers, were used in the production of 26,098 ounces of gold valued at $913,430; more than one-half of this gold was produced by snipers, over 12,000 of whom worked at some time during the year.

Nevada County, because of the productivity of its Grass Valley-Nevada City district, continued to be the leading gold-producing county of the State; 26 percent of the State's gold and 43 percent of the State's lode gold was mined during 1937. The output of dredges was largely responsible for the importance of Sacramento, Yuba, and Merced Counties as producers. Amador, El Dorado, Calaveras, Tuolumne, and Mariposa Counties on the Mother Lode were important gold producers. The rapidly increasing outputs from ore bodies recently opened in the Mojave district explained the large production of Kern County in 1937; Butte, Placer, Shasta, and Siskiyou Counties were also large producers of gold.

The principal gold-producing companies of California working lode deposits in 1937 arranged roughly in order of importance as producers, included the Empire Star Mines Co., Ltd. (Nevada County), Idaho Maryland Mines Corporation (Nevada County), Lava Cap Gold Mines Corporation (Nevada County), Golden Queen Mining Co. (Kern County), Carson Hill Gold Mining Corporation (Calaveras County), Argonaut Mining Co., Ltd. (Amador County), and Central Eureka Mining Co. (Amador County). The leading producers of placer properties were the Yuba Consolidated Gold Fields (Yuba, Merced, Siskiyou, and Butte Counties), Natomas Co. (Sacramento County), and Capital Dredging Co. (Sacramento County).

The output of silver from California ores, gravels, and retreated tailings in 1937 was 2,888,265 fine ounces valued at $2,234,073, compared with the production of 2,103,799 fine ounces valued at $1,629,392 in 1936; the increase was 37 percent in both quantity and value. Of the lode silver 36 percent was derived from dry gold ore; 34 percent from silver ore; 17 percent from dry gold-silver ore; 10 percent from copper ore, and the remainder from other types of ore. A small quantity of silver was also recovered as a byproduct of gold dredging. One-half of the silver output from lode mines was recovered by the smelting of concentrates; 25 percent was recovered by cyanidation as bullion; 17 percent by direct smelting of ore, and 8 percent by amalgamation as bullion.

CENTRAL STATES

The only production of mine gold in the Central States in 1937 was 51.44 fine ounces valued at $1,800, from the Michigan mine at Ishpeming, Mich. The output of silver from mines in the Central States increased from 165,500 ounces in 1936 to 206,041 ounces in 1937. Of the Michigan output in 1937 (25,454 ounces) 25,446 ounces were derived from copper ore and 8 ounces from gold ore. Lead ore in

southeastern Missouri was responsible for 179,700 ounces and the output was entirely from the refining of lead bullion and the treatment of skimmings and residues, for no copper ore was treated in 1937. Silver recovered from galena concentrates shipped from southern Illinois fluorspar mines in 1937 was 887 ounces compared with 1,780 ounces in 1936.

COLORADO

The expansion in gold mining in Colorado that followed the advance in the price of gold in 1933 resulted in an appreciable annual increase in production from 1934 to 1936, inclusive, and in the maintenance of the output in 1937 at nearly the same rate as in 1936, according to Charles W. Henderson and A. J. Martin, of the United States Department of the Interior, Bureau of Mines. The total mine production of gold in 1937 was 368,905 ounces valued at $12,911,675, an increase of 2,298 ounces ($80,430) over 1936; the increase, however, was due to a moderate revival of mining of complex zinc-lead-copper-silver-gold ores and an increased output of silver-copper-gold ores. The principal gold-producing counties and the percentage of the State total contributed by each follow: Teller County, 39 percent; Park, 13 percent; Clear Creek, 9 percent; San Juan, 7 percent; Boulder, 6 percent; Lake, 5 percent; Gilpin, 4 percent; and Rio Grande, 4 percent. The largest gold-producing companies in Colorado in 1937 (all from lode mines), in order, were the United Gold Mines Co., Cresson Consolidated Mining & Milling Co., and Golden Cycle-Ajax Operations, Cripple Creek district; London Gold Mines Co., Mosquito district; Shenandoah-Dives Mining Co., Animas district; Summitville Consolidated Mines, Inc., Summitville district; Minnesota Mines, Inc., Empire district; and Empire Zinc Co., Battle Mountain district. A total of 2,068,619 tons of mine and dump ore and old tailings was sold or treated in Colorado in 1937, of which 1,681,183 tons were classed as dry and siliceous (gold, gold-silver, and silver) ores and yielded 90 percent of the total State gold. Copper, zinc-lead, and lead ores, in order, constituted nearly all the remainder of the tonnage from lode mines and yielded 6 percent of the gold. The remaining 4 percent was recovered by one floating connected-bucket dredge and 22 dry-land and dragline floating dredges, which handled approximately 1,635,130 cubic yards of gravel, and many small-scale placer operations for which the quantity of gravel handled is unobtainable.

The mine production of silver in Colorado in 1937 was 6,260,693 ounces valued at $4,842,646, an increase of 6 percent in quantity and value over 1936. Copper ore shipped to smelters from Eagle County yielded 65 percent of the State total silver in 1937. The next largest sources of silver were dry and siliceous gold and gold-silver ores, chiefly from San Juan, San Miguel, Clear Creek, Ouray, and Lake Counties and dry silver ore from the old silver-producing districts of Mineral and Pitkin Counties. Lead, lead-copper, and zinc-lead ores combined yielded only 6 percent of the State total silver. The principal producers of silver in Colorado in 1937 were the Empire Zinc Co., Battle Mountain district; Shenandoah-Dives Mining Co., Animas district; Emperius Mining Co. and Commodore-Bachelor Mines, Inc., Creede district; Veta Mines, Inc., Upper San Miguel district; and Aspen Leases, Aspen district. The total production of

gold and silver in Colorado, in terms of recovered metals, compiled from all sources by Charles W. Henderson, from 1858 to 1937, inclusive, has been: Gold, 36,815,070 ounces; silver 684,509,575 ounces.

EASTERN AND APPALACHIAN STATES

The mine production of gold in the Eastern and Appalachian States increased from 10,377.10 fine ounces in 1936 to 10,680.90 ounces in 1937. There were decreased yields from mines in Alabama, North Carolina, and Tennessee but substantial increases at mines in Georgia, Maryland, Pennsylvania, South Carolina, and Virginia. Five mines, one each in Alabama, Maryland, North Carolina, South Carolina, and Virginia yielded about 70 percent of the 1937 gold.

In 1937 Alabama produced 2,459.89 ounces, Georgia 742.72 ounces, Maryland 1,040 ounces, North Carolina 948.65 ounces, Pennsylvania 1,348 ounces, South Carolina 2,482.56 ounces, Tennessee 263 ounces, and Virginia 1,396.08 ounces. About 40 placer mines in Alabama, Georgia, North Carolina, South Carolina, and Virginia yielded 631.91 ounces of gold compared with 339.34 ounces from 47 mines in 1936. Of this 1937 total, 29 mines in Georgia yielded 521.43 ounces from placers, and the Ferey mine in that State was the only placer that reported more than 100 ounces of gold.

None of the zinc or zinc-lead ores yielded any gold. Copper ore and copper concentrates from pyritiferous magnetite ores in Tennessee, North Carolina, and Pennsylvania yielded 1,721 ounces of gold or 306 ounces more than in 1936. All the Tennessee gold was derived from copper ore mined in Ducktown district.

Siliceous gold ore (60,542 tons) milled or shipped to smelters from mines in Alabama, Georgia, Maryland, North Carolina, South Carolina, and Virginia yielded 8,328 ounces of gold or about 295 ounces less than in 1936. Of this quantity of ore 38,617 tons were treated at gold and silver mills and only 102 tons of crude siliceous ore were shipped to smelters. Gold ore treated at flotation plants yielded 1,256 tons of gold concentrates which were also shipped to smelters and yielded 4,215 ounces of gold. Bullion at gold milling plants yielded 4,044 ounces, of which 2,241 ounces were recovered by cyanidation.

The larger producers from gold ore in 1937 were the Hog Mountain mine near Alexander City, Ala., the Maryland near Bethesda, Md., the Rudisil near Charlotte, N. C., the Haile near Kershaw, S. C., and the Vaucluse in Orange County, Va.

The mine output of silver was 106,873 ounces in 1937 against 83,350 ounces in 1936. Of the 1937 output, copper ores in Tennessee yielded 48,207 ounces; copper ores in North Carolina 5,284 ounces; copper concentrates from pyritiferous magnetite ore from Pennsylvania 9,497 ounces and zinc-lead ores from New York and Tennessee 42,350 ounces.

Siliceous ores yielded 1,505 ounces (mainly from Alabama and South Carolina mines). Bullion from placer mines amounted to only 30 ounces. The silver recovered from New York mines was from lead concentrates smelted, and some lead carbonate ore shipped to smelters from the Embree mine in Tennessee also yielded about 1.1 ounces of silver a ton.

IDAHO

The output of gold, silver, copper, lead, and zinc from mines in Idaho in 1937 was valued at $37,840,184 compared with $27,654,472 in 1936, according to C. N. Gerry and Paul Luff, of the Bureau of Mines, Department of the Interior.

The output of gold increased slightly from 80,291 fine ounces in 1936 to 81,861 fine ounces in 1937, as a result of the increase in the output of gold from placer mines; gold from lode mines (41,321 ounces) decreased 4,540 ounces, but gold recovered from placers (40,540 ounces) increased 6,110 ounces. Siliceous ore yielded 37,546 ounces of gold in 1937 or nearly 46 percent of the total gold; placers yielded nearly 50 percent of the total gold. Crude ore and old tailings shipped direct to smelters yielded 4,949 ounces of gold, concentrates 15,127 ounces, and bullion from gold and silver mills 21,245 ounces. Most of the gold from lode mines—36,025 ounces—was recovered from dry and siliceous gold ore, 2,840 ounces were recovered from zinc-lead ore, and most of the remainder from lead ore, silver ore, and gold-silver ore. The production of gold from 10 floating dredges in 1937 was 28,962 ounces (35.4 percent of the State gold output), an increase of 2,864 ounces over the output from 12 floating dredges in 1936. The largest producers of gold in Idaho in 1937 were the Fisher-Baumhoff dredge at Centerville, Golden Anchor mine at Burgdorf, Moores Creek Dredging Co. at Idaho City, Yellow Pine Co. at Stibnite, Warren Dredging Co. at Warren, Gold Hill mine at Quartzburg, Placer Basin mine at Cuprum, and Jordan Creek dredge at De Lamar.

The output of silver in Idaho in 1937 was 19,587,766 ounces compared with 14,537,530 ounces in 1936, an increase of 5,050,236 ounces, or 35 percent, and the largest silver output ever recorded in the State. Idaho continued to hold first place in the United States in the output of silver, followed by Utah and Montana. Silver recovered from siliceous silver ore was 14,119,025 ounces in 1937, an increase from 9,991,204 ounces in 1936. There were also increases in silver recovered from zinc-lead ore and old tailings and lead ore (nearly 17 percent of the total silver came from zinc-lead ore and old tailings and nearly 11 percent came from lead ore). Crude ore and old tailings shipped direct to smelters yielded 988,073 ounces of silver, concentrates 18,578,929 ounces, and bullion from gold and silver mills 8,477 ounces. Placer mines yielded 12,287 ounces. Mines in the Coeur d'Alene district produced 94 percent of the total silver. The output of silver from the Sunshine mine in 1937 increased to 12,152,000 ounces; it was again the largest producer of silver in the United States. Other large producers of silver in Idaho were the Hecla mine at Burke, Bunker Hill & Sullivan property at Kellogg, Morning mine at Mullan, Crescent mine east of Kellogg, Polaris mine near Kellogg, Triumph mine near Ketchum, Page mine west of Kellogg, Gold Hunter property at Mullan, and Sherman mine at Burke. The Coeur d'Alene district produced 1,731,801 tons of ore and old tailings, 3,659 ounces of gold, 18,457,726 ounces of silver, 3,888,157 pounds of copper, 193,010,644 pounds of lead, and 94,140,000 pounds of zinc. In 1937 there were 347 producing lode mines in Idaho and 741 producing placer mines, compared with 281 lode mines and 828 placer mines in 1936. Since 1863 Idaho has yielded 7,112,687 fine ounces of gold and 399,134,261 fine ounces of silver.

MONTANA

The output of gold, silver, copper, lead, and zinc from mines in Montana in 1937 was valued at $58,402,016 compared with $42,173,182 in 1936, an increase of 38 percent, according to T. H. Miller of the Bureau of Mines, United States Department of the Interior. There were increases in copper, gold, and silver, but decreases in lead and zinc. The output of gold was 202,252 ounces, valued at $7,078,820, an increase of 12 percent from 180,209.20 ounces in 1936. There was a marked increase in gold recovered from dry and siliceous gold ore, silver ore, and copper ore in 1937; placers yielded 36,397 ounces of gold, a decrease of nearly 10 percent. Floating bucket dredges yielded 17,564 ounces of gold. In 1937, combined dry and siliceous ore yielded 140,857 ounces of gold; copper ore, 14,151 ounces; zinc-lead ore, 9,564 ounces; lead ore, 1,047 ounces; and zinc ore, 236 ounces. A large gain was made in gold recovered from lode mines—165,855 ounces—chiefly from gold ore, but a decrease of 4,018 ounces from placers, chiefly those operated by dry-land and floating bucket dredges. An important gain was made in 1937 in gold recovered from bullion—63,537 ounces—and from combined concentrates and crude ore smelted—102,318 ounces. In 1936 crude ore supplied 45,153.73 ounces of gold; concentrates 47,205.64 ounces; and bullion, 47,434.03 ounces. Substantial increases in the output of gold were recorded in Silver Bow County (chiefly the Butte district) and from Phillips, Jefferson, Park, Beaverhead, Broadwater, and Granite Counties. The leading producers of gold in Montana in 1937 were the Anaconda Copper Mining Co. at Butte; Ruby Gulch at Zortman; Porter Bros. Corporation (dredge) near Helena; Jardine at Jardine; Little Ben (August) at Landusky; Ermont Mines near Dillon; Spring Hill of the Montana Consolidated Mines Corporation near Helena; Jay Gould mine of the Standard Silver Lead Mining Co. near Wilborn; West Mayflower near Renova; Pioneer Placer Dredging Co. at Gold Creek; and the Hidden Lake Venture, Inc. in the Red Lion district.

The output of silver increased slightly from 11,600,563 ounces in 1936 to 11,812,093 ounces in 1937; a substantial increase in silver from copper ore was offset by a large decrease in silver from zinc-lead ore. Copper ore yielded 6,644,653 ounces of silver; dry and siliceous ore, 2,468,049 ounces; zinc-lead ore, 2,486,853 ounces; lead ore, 145,828 ounces; and zinc ore, 60,295 ounces. A large increase of nearly 224,000 ounces of silver was shown in silver from concentrates of all classes, especially from copper ore and zinc-lead ore from the Butte property of the Anaconda Copper Mining Co., which was by far the leading producer of silver in Montana.

Other large producers of silver in 1937 were the Trout mine of the American Machine & Metals, Inc.; Flathead (Anaconda Copper Mining Co.); Emma & Ophir, operated by the Anaconda Copper Mining Co.; Granite Bimetallic (Philipsburg Mining Co.); Comet & Gray Eagle (Basin Montana Tunnel Co.); Two Per Cent, at Philipsburg; and Silver Prince, of the Contact Mines Corporation.

There were 615 lode mines and 406 placers operating in 1937, compared with 570 lode mines and 284 placers in 1936. The ore mined and treated in 1937 increased to 4,898,009 tons, compared with 3,853,116 tons in 1936.

NEVADA

Both gold and silver production declined in Nevada during 1937 compared with 1936, according to Charles White Merrill, United States Department of the Interior, Bureau of Mines. Gold output in 1937 was 281,332 fine ounces valued at $9,846,620, compared with 286,370 ounces valued at $10,022,950 in 1936. Silver production in 1937 was 4,864,750 fine ounces valued at $3,762,884, compared with 5,068,786 ounces valued at $3,925,775 in 1936. In both quantity and value the decrease in gold production was 2 percent and in silver production 4 percent.

Gold was recovered from the following sources: Dry gold ore, 58 percent; copper ore, 24 percent; dry gold-silver ore, 11 percent; and smaller percentages from dry silver ore and lead ore; the remaining 3 percent was derived from placer mines.

Gold and silver mills recovered 30 percent of the State's lode gold as cyanidation bullion and 10 percent as amalgamation bullion; 37 percent was recovered by the smelting of concentrates from concentrating mills and gold and silver mills, and the remaining 23 percent was recovered by the direct smelting of ore.

The leading gold-producing counties, in order of their importance, were White Pine, Esmeralda, Storey, and Nye. The principal gold-producing companies of Nevada, arranged roughly in order of importance as producers, included Nevada Consolidated Copper Corporation (White Pine County), the Consolidated Coppermines Corporation (White Pine County), the Weepah Nevada Mining Co. (Esmeralda County), the Black Mammoth Consolidated Mining Co. (Esmeralda County), the Eastern Exploration Co. (Esmeralda County), and the Dayton Consolidated Mines Co. (Lyon County).

Nevada silver was recovered from the following sources in 1937: Dry gold-silver ore, 30 percent; dry silver ore, 25 percent; dry gold ore, 15 percent; zinc ore, 10 percent; zinc-lead ore, 9 percent; copper ore, 6 percent; lead ore, 5 percent; and the remainder from lead-copper ore and from placer mines. The direct smelting of crude ore accounted for 47 percent of the lode silver produced in Nevada during 1937; 37 percent was derived from the smelting of concentrates from concentrating and gold and silver mills; 16 percent was recovered as bullion at gold and silver mills almost entirely by cyanidation.

The leading silver-producing counties in order of their importance were Nye, White Pine, Lincoln, Storey, and Esmeralda. The leading silver-producing companies of Nevada, arranged roughly in order of their importance, included the Tonopah Mining Co. of Nevada (Nye County), (operated chiefly bv lessees), Combined Metals Reduction Co. (Lincoln County), Treadwell Yukon Co., Ltd. (Nye County), Tonopah Belmont Development Co. (Nye County), (operated chiefly by lessees), Desert Silver, Inc. (Esmeralda County).

NEW MEXICO

The output of gold from New Mexico ores and gravels in 1937 was 41,171 fine ounces, valued at $1,440,985, an increase of 25 percent in quantity and value over 1936, according to Charles W. Henderson and A .J. Martin, of the United States Department of the Interior, Bureau of Mines. Expanded operations at mines that were being worked and developed in 1936 produced the largest part of the increase

in 1937; the remainder was recovered principally from base-metal ores containing comparatively small quantities of gold produced at mines reopened when copper, lead, and zinc prices advanced early in 1937. Dry and siliceous ores yielded 48 percent of the total gold; zinc-lead ore 30 percent; copper ore 14 percent; and placers, including a small quantity from lead and lead-copper ores, 8 percent. The combined output of the 10 companies which follow, listed in order of rank, constituted 90 percent of the State total gold: American Metal Co. (Pecos mine), in the Willow Creek district; Black Hawk Consolidated Mines Co., Mogollon district; Maxwell Land Grant Co., Mount Baldy district; Nevada Consolidated Copper Co., Central district; Veta Mines, Inc., and East Camp Exploration Co., Steeple Rock district; Banner Mining Co., Lordsburg district; and Rosedale Gold Mines, Inc., Rosedale district—all operating lode mines—and John I. Hallet Construction Co., Hillsboro district, and Caballo Construction Co., Pittsburg district, operating placer mines. The remaining 10 percent was recovered by 106 lode and 158 placer mine operations, nearly all worked on a small scale.

The continuance through 1937 of the Government price of $0.7757 an ounce for newly-mined silver stimulated production of silver from dry and siliceous ores and helped to maintain the output from base-metal ores; the latter, however, showed a small decline from 1936. The State total production of silver in 1937 was 1,243,766 fine ounces, valued at $962,053, an increase of 7 percent in quantity and value over 1936. The largest district gains in 1937 were 146,690 ounces in the Steeple Rock district and 46,584 ounces in the Lordsburg district. The largest decrease was 65,658 ounces in the Central district. The Mogollon, Willow Creek (Pecos mine), and Central districts each produced more than 300,000 ounces of silver. The largest silver-producing companies, in order, were the American Metal Co. of New Mexico, Willow Creek district; American Smelting & Refining Co. Ground Hog unit, Central district; Black Hawk Consolidated Mines Co., Mogollon district; and East Camp Exploration Syndicate, Steeple Rock district. Dry and siliceous ores yielded 44 percent of the State total silver; zinc-lead ore 38 percent; copper ore 17 percent; and lead, lead-copper, and zinc ores 1 percent. A negligible quantity was recovered from placer mines. Figures compiled by Charles W. Henderson show that from 1848 to 1937, inclusive, New Mexico mines have produced 2,004,963 fine ounces of gold and 59,909,682 fine ounces of silver.

OREGON

The output of gold in Oregon in 1937 declined substantially compared with 1936, and the production of silver fell off by an even larger percentage, according to Charles White Merrill, United States Department of the Interior, Bureau of Mines. The production of gold from Oregon ores, gravels, and re-treated tailings was 52,662 fine ounces valued at $1,843,170 compared with 60,753 fine ounces valued at $2,126,355 in 1936; the decrease was 13 percent. Placer mines produced 65 percent of the gold and lode mines 35 percent. Dredges of the connected-bucket type treated 5,017,000 cubic yards of material in 1937, compared with 5,148,000 yards in 1936, and recovered 17,178 fine ounces of gold valued at $601,230 compared with 17,067.26 fine ounces valued at $597,354 in 1936. Thus, this type of dredge

accounted for 50 percent of the State's placer gold. Dragline dredges (those having floating washing plants, to which gravel is delivered by a dragline type of power shovel) handled 2,085,000 cubic yards of material in 1937, compared with 2,066,000 yards in 1936, and recovered 9,126 fine ounces valued at $319,410 in 1937, compared with 12,989.42 fine ounces valued at $454,630 in 1936; dragline dredging contributed 27 percent of the State's placer gold. The remaining placer gold was treated at hydraulic mines, drift mines, and properties using nonfloating washing plants with mechanical loading equipment and small-scale hand methods. Virtually all of the lode gold was recovered from dry gold ore; concentration followed by the smelting of concentrates accounted for the major part of the gold recovered. Grant, Josephine, Baker, and Jackson Counties were the leading producers of placer gold in 1937, and Baker County produced 64 percent of the lode gold during the same year.

Oregon ores, gravels, and re-treated tailings in 1937 yielded 60,564 fine ounces of silver valued at $46,846, compared with 85,061 fine ounces valued at $65,880 in 1936; the decrease was 29 percent in both quantity and value. Baker County accounted for 57 percent of the silver production in the State and Grant County provided 21 percent. Most of the silver was derived from dry gold ores, and was recovered by the smelting of concentrates produced at concentrating mills and gold and silver mills.

SOUTH DAKOTA

Gold mining is one of the major industries of the Black Hills region of South Dakota, yielding 581,544 fine ounces of gold worth $20,354,040 and 139,638 fine ounces of byproduct silver worth $108,010 in 1937, according to Charles W. Henderson and A. J. Martin of the United States Department of the Interior, Bureau of Mines. The output of gold was close to the record for both quantity and value established in 1936, when 586,353 ounces valued at $20,522,369 were produced. The mines are in Custer, Lawrence, and Pennington Counties and by far the largest producer in 1937, as in the past, was the Homestake mine at Lead, Lawrence County, the leading producer of gold in the United States. From 1876 to 1937, inclusive, this mine yielded bullion and concentrates which brought a net return of $340,790,554 and paid $106,103,962 in dividends. The mine is worked through two shafts, the deepest of which was 4,250 feet at the end of 1937 and is designed to be sunk to a vertical depth of 5,000 feet. The ore is treated by amalgamation in the South mill, followed by separate cyanidation of sands and slimes in three other plants. The company employs about 2,000 men.

The property of the Bald Mountain Mining Co. at Trojan yielded the second largest individual output of gold and silver in South Dakota in 1937, followed, in order, by the Maitland and Gilt Edge mines in Lawrence County and the Golden Slipper mine in Pennington County. Placer mines, principally those worked by machinery along French Creek in Custer County, yielded 1,011 ounces of gold in 1937. The total production of gold and silver (in terms of recovered metals) in South Dakota from the beginning of production in 1875 to the end of 1937, as compiled by Charles W. Henderson, has been 17,637,261 ounces of gold, valued at $398,901,344, and 8,670,112 ounces of silver, valued at $6,183,709.

TEXAS

Nearly all the gold produced in Texas to date has been a byproduct derived from the treatment of silver ore from the Presidio mine at Shafter, in Presidio County; the quantity recovered from this source in 1937 was 557 ounces and only 5 ounces were produced at other mines in the State, according to Charles W. Henderson and A. J. Martin of the United States Department of the Interior, Bureau of Mines. The output of silver from the Presidio mine in 1937 was 1,220,921 ounces and the combined output from other mines, chiefly the Plata Verde in Hudspeth County, was 104,739 ounces, a total for the State of 1,325,660 ounces, valued at $1,025,398, compared with 1,361,459 ounces valued at $1,054,450 in 1936. Since April 1926 the Presidio mine has been operated by the American Metal Co. of Texas, which treats the ore by gravity concentration and cyanidation. All the silver produced at other mines in the State in 1937 was contained in ore shipped direct to smelters. The total production of gold and silver in Texas (in terms of recovered metals) from the beginning of production in 1885 to the end of 1937, compiled from all sources by Charles W. Henderson—mostly from the Presidio mine—has been 6,660 fine ounces of gold and 27,316,626 fine ounces of silver.

UTAH

The output of gold, silver, copper, lead, and zinc from mines in Utah in 1937 was valued at $87,897,549, an increase from $48,836,356 in 1936, according to T. H. Miller of the Bureau of Mines, United States Department of the Interior.

The gold output was 322,759 ounces, valued at $11,296,565, an increase from 223,444 ounces in 1936. The output exceeded the previous high of 252,439 ounces produced in 1906. Dry and siliceous ore (chiefly gold ore) yielded 78,630 ounces, copper ore, 202,427 ounces, zinc-lead ore, 31,107 ounces, and lead ore, 10,540 ounces. Placers yielded only 55 ounces of gold. There was an increase of 85,140 ounces of gold recovered from copper ore, 11,374 ounces of gold from zinc-lead ore, and 4,638 ounces from lead ore, but a decrease of 1,731 ounces from dry and siliceous ore. The leading producers of gold in Utah were the Utah Copper, United States & Lark, Eureka Standard, Mammoth, Snyder Mines, Inc. (Mercur unit), Centennial Beck & Victoria, National Tunnel & Mines Co. (Utah-Apex and Utah-Delaware), Geyser Marion, Tintic Standard, Allied Annie Laurie, Niagara, and Silver King Coalition mines. The combined gold output recovered from these properties represented nearly 91 percent of the total gold output of the State.

The silver production in Utah increased from an output of 9,997,645 ounces in 1936 to 12,869,117 ounces in 1937. Despite the large increase, the output in 1937 was considerably less than the average annual output (17,295,115 ounces) for the decade 1921–30. Separated as to source, the silver came chiefly from zinc-lead ore, which supplied 5,814,961 ounces in 1937 compared with 4,690,095 ounces in 1936; lead ore supplied 1,632,958 ounces in 1937 compared with 1,155,961 ounces in 1936. Dry and siliceous ore yielded 3,503,118 ounces of silver in 1937, and copper ore 1,918,080 ounces. First-class crude ore smelted yielded 5,127,834 ounces of silver, concentrates 7,737,160

ounces, and bullion from gold and silver mills, 4,123 ounces. In 1937 the Tintic district in Juab and Utah Counties produced 4,030,424 ounces compared with 2,787,321 ounces in 1936. The Bingham district, Salt Lake County, produced 4,873,479 ounces compared with 3,753,539 ounces in 1936, and the Park City region, Summit and Wasatch Counties, 3,132,552 ounces compared with 2,708,949 ounces in 1936. The seven largest producers of silver in Utah were the United States & Lark property at Bingham, Tintic Standard at Dividend, Utah Copper at Bingham, Silver King Coalition, Park City Consolidated, and Park Utah Consolidated, all near Park City, and Eureka Standard near Dividend.

There were 203 producing mines, of which 189 were lode mines and 14 placers, compared with 171 lode mines and 28 placers in 1936.

WASHINGTON

The output of gold, silver, copper, lead, and zinc from mines in Washington in 1937 was valued at $2,253,054 compared with $1,015,771 in 1936, according to C. N. Gerry and T. H. Miller, of the Bureau of Mines, United States Department of the Interior.

The output of gold was 36,310 fine ounces, valued at $1,270,850, a record for the State, and an increase from 12,217 fine ounces in 1936. Most of the gold output, 35,914 fine ounces or 99 percent, came from dry and siliceous gold ores; placers yielded 371 fine ounces, or more than 1 percent of the gold. First-class ore shipped for smelting—37,470 tons—yielded 9,387 ounces of gold, chiefly from the Mountain Lion, Aurum, and Republic mines in the Republic district. A large gain was made in ore (142,790 tons) treated in gold and silver mills; the yield was 22,619 fine ounces of gold. The largest gold producers in the State in 1937 were the Azurite mine, Whatcom County, the Knob Hill, Mountain Lion, Quilp, and Aurum mines in Ferry County, and the Bodie mine in Okanogan County. A feature of the year which contributed to the increased gold output was the continuous operation of the Azurite mine in the Slate Creek district of Whatcom County. A new 100-ton concentration-cyanidation mill treated 27,530 tons of gold ore.

The output of silver, chiefly from the Republic district, Ferry County, was 126,304 ounces, an increase of 59,404 ounces over 1936. Of the total silver, 87,459 ounces had its source in dry and siliceous gold ore, 17,866 ounces in dry and siliceous silver ore, 14,260 ounces in zinc-lead ore, 5,257 ounces in copper ore, 1,414 ounces in lead ore, and 48 ounces in placer dust and bullion. Crude ore supplied most of the silver or 59,332 ounces; concentrates, 32,313 ounces; and ore treated by amalgamation or cyanidation, 34,611 ounces. The four largest producers of silver, each producing more than 10,000 ounces, were the Mountain Lion, Aurum, Knob Hill, and Quilp mines, all at Republic, and the Josephine mine at Metaline Falls. There were 65 lode mines and 90 placer mines producing in 1937, as compared with 44 lode mines and 106 placer mines in 1936.

The large increase in gold production was due to expenditure on mill construction at the Azurite, Knob Hill, and First Thought mines. The mill of the Pend Oreille Mines & Metals Co. resumed treating zinc-lead ore September 15, and construction work was continued on the 1,000-ton mill designed for copper ore of the Howe Sound Co. in Chelan County.

WYOMING

Gold production in Wyoming decreased from 1,964 ounces valued at $68,754 in 1936 to 1,776 ounces valued at $62,160 in 1937, according to Charles W. Henderson and A. J. Martin of the United States Department of the Interior, Bureau of Mines. The output of silver in 1937 was only 203 ounces, valued at $157. The E. T. Fisher Co., operating its dragline excavators and portable screening and sluicing equipment on Rock Creek in the Atlantic City district, Fremont County, for its fifth season, produced 87 percent of the State output of gold and 92 percent of the silver. The second largest individual output of gold from a single operation was 160 ounces produced by lessees at the Iron Duke-Hidden Hand lode mine, also in the Atlantic City district. Scattered lode and placer operations in Albany, Carbon, Fremont, Sheridan, and Teton Counties recovered small quantities of gold and silver in 1937. The total production of gold and silver (in terms of recovered metals) in Wyoming from 1867 to 1937, inclusive, according to Charles W. Henderson, has been 75,292 fine ounces of gold and 73,969 fine ounces of silver.

Distribution of the gold and silver production of the United States, in fine ounces, for 1937, as to sources of production

[Table furnished by the Bureau of Mines]

State	Gold			Silver		
	Lode mines	Placer mines: Floating connected bucket dredges	Placer mines: All other	Dry and siliceous ores [1]	Lead ores [2]	Copper ores
	Ounces	*Ounces*	*Ounces*	*Ounces*	*Ounces*	*Ounces*
Alabama	2,455		5	457

Virginia	1,299		97	111		
Washington	35,939		371	105,373	15,674	5,257
Wyoming	165		1,611	203		
Total [3]	3,104,175	644,143	368,701	32,185,043	18,836,003	20,381,164

[1] Contains small quantity of silver from placer mines (less than 142,400 ounces).
[2] Includes silver in lead, silver-lead, zinc-lead, zinc and zinc-lead-(copper) ores.
[3] Philippine Islands and Puerto Rico excluded: Philippine Islands report 716,124 ounces of silver from lode mines and 3,647 ounces from placers; also 705,074 ounces of gold from lode mines and 11,893 ounces of gold from placers.

Refinery production (arrivals thereat) of gold mined in the several States and Territories in 1936 and 1937, with the increase and decrease in each for the latter year

State and territory	Production [1]				Increase, 1937	Decrease, 1937
	1936		1937			
	Ounces	*Value*	*Ounces*	*Value*	*Ounces*	*Ounces*

[1] Value of gold in 1934 and thereafter calculated on basis of $35 per fine ounce; prior thereto on basis of $20.67+ per fine ounce.

[2] Value of silver calculated on the basis of the average amount per ounce returned to depositors of newly mined domestic silver; in 1934 at $0.64+ per fine ounce, in 1935 at $0.71875, in 1936 at $0.7745, in 1937 at $0.7735.

Gold and Silver Used in Industrial Arts in the United States During the Calendar Year 1937

Issue by the mints and assay offices of gold and silver for industrial-arts use has very substantially lessened since the monetary price of gold was fixed at $35 per fine troy ounce and a one-fourth of 1 percent charge imposed, and the supplying of industry by commercial refiners of those metals has substantially increased. Previously the principal source of gold supply to industry was the mint service institutions.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1937, with the classes of material from which they were made.

Gold and silver issued for use in the industrial arts during the calendar year 1937 [1]

Item	Issued by—	Gold	Silver
		Value	*Fine ounces*
Bullion	Mints and assay offices	$514,248	233,112
Bullion in various forms	Private refiners and dealers	39,108,090	50,981,814
United States coin [2]	Banks, etc.		77,344
Total		39,622,338	51,292,270
Old jewelry, plate, scrap, etc., contained in private refineries' and dealers' returns, and that returned to monetary use.		36,407,945	23,564,986
Net new material used in industry		3,214,393	27,727,284

[1] For explanation of calculation see p. 48.
[2] Estimated; the quantity of silver is equal to 100,000 silver dollars.

Gold and silver furnished for use in manufactures and the arts, and classification of the materials used, since 1880

[1] Value of gold in 1934 and thereafter calculated on basis of $35 per fine ounce; prior thereto on basis of $20.67+ per fine ounce.

[2] Treated as having priority as regards issue or reissue.

Mint Issue of Fine Gold Bars for Industrial Use

(On value basis; see p. 48)

The value of the fine gold bars issued for industrial use in exchange for cash by the United States mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the calendar year 1937, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1937:		1937—Continued.	
January	$44,345.66	September	$22,226.29
February	43,111.39	October	30,990.36
March	38,708.60	November	20,529.04
April	95,354.87	December	36,776.55
May	57,771.00		
June	37,035.68	Total	510,048.04
July	42,691.03		
August	40,507.57	Prior calendar year	722,857.24

Domestic coinage of the United States mints during the calendar year 1937

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases Used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations the receipt classification item of "Domestic refinery bullion" includes that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that work only old materials.

Gold and silver production estimates.—These estimates consist of arrivals at United States mints and assay offices and at privately owned refineries (bullion-producing plants), of gold and silver from mines within the States and Territories of the United States, including the production of the Philippine Islands which comes to the United States for reduction. The portion of this figure representing mint receipts is on the quantity basis.

Gold and silver consumption in industry.—These estimates comprise bar sales by the mints and assay offices for industrial use (partly estimated) plus similar items issued by private refiners, dealers (and manufacturers), as reported to the Mint Bureau, plus an estimate of domestic coin melted for industrial use; from the total of these is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net new materials consumed.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with

annual addition of new coinage and reported imports, and deduction of withdrawn coin, reported exports, and an estimate for industrial use; from 1928 to 1933 the additional factor of gold coin "earmarked," or set aside for foreign owners, was considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. After 1933 gold coin has been omitted as such; any unmelted gold coin on hand is treated as bullion. In 1928 minor coin was added, using only the 5-cent nickel and 1-cent bronze coins of the type commonly in circulation and considering only the amounts coined and those withdrawn for recoinage. The monetary stock tables for a series of years have been revised back to the establishing of the Federal Reserve System (1914) to include earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation omits the coin received for recoinage but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

Income and Expenses of the United States mint

Item	Philadelphia Mint	San Francisco Mint	Denver Mint
INCOME			
Revenues:			
Melting charges	$10,520.26	$35,756.26	$7,236.33
Parting and refining charges		242,191.40	78,566.68
Handling charges on gold receipts	11,963.26	963,681.25	86,726.39
Handling charges on gold sales	284.89	148.32	23.07
Fine and unparted bar charges	96.86	96.19	
Charges on proof coins	5,650.70		
Charges on altered coins	338.00	7.60	
Transportation charges on bullion			
Proceeds of medals sold	3,286.48		
Receipts for special assays of bullion and ores	554.00	46.00	327.50
Value of bullion recovered incident to receipt of deposits	6,204.75	6,738.16	8,046.95
Value of bullion recovered from refining and coining operations (net)	20,639.20	96,326.78	12,664.09
Gain on lightweight and mutilated coin purchased for recoinage	29.18	21.50	30.65
Gain on bullion shipments (net)	6.82		
Proceeds sale old material	145.57	3,442.17	1,156.02
Sale of byproducts		17,049.39	
Fines and penalties (bullion and coin forfeitures)	3,577.70	6,123.16	405.05
Commission on telephone calls	104.02		40.00
Seigniorage on subsidiary silver coinage	8,077,177.27	690,013.78	1,085,421.12
Seigniorage on minor coinage (nickel)	1,761,563.63	1,925.15	663,518.00
Seigniorage on minor coinage (bronze)	2,536,708.05	218,757.91	181,077.35
Unexplained cash balance		10.12	
Total revenue	12,438,850.64	2,282,335.14	2,125,239.20
Appropriation earnings:			
Charges for manufacture of coins for foreign countries	37,777.96	76,140.74	
Charges for manufacture of special medals	12,185.36		
Charges for work and supplies for other institutions	41,732.93		
Total earnings	91,696.25	76,140.74	
Total income	12,530,546.89	2,358,475.88	2,125,239.20
EXPENSES			
Payable from appropriations:			
Transportation of bullion and coin between mints and assay offices	10,036.02	7.63	3.75
Personnel	838,698.38	367,042.47	340,306.97
Other expenses, including supplies, materials, equipment and miscellaneous items	132,230.03	52,563.99	45,312.31
Loss on operative sweeps sold		208.33	2,723.32
Interinstitution items not involving appropriation transfers	[1] 12,592.18	3,570.23	4,939.00

Total	5,616,238	526,432	6,142,670
Estimated stock of coin in the United States June 30, 1938	920,540,703	157,183,351	1,077,724,054

[1] For method of estimating, see p. 48.

NOTE.—The number of standard silver dollars coined to June 30, 1938, was 847,629,915, which, added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 848,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000, the net export from November 1919 to July 1920, in movement due to the high price of silver, was 28,287,142; those melted under the terms of the Pittman Act of Apr. 23, 1918, totaled 270,232,722; those melted otherwise (mutilated, etc.) since 1883 numbered 227,363, and the number of Hawaiian dollars melted to June 30, 1938, was 455,329, a total disposition of 301,697,556, leaving in the United States on June 30, 1938, 547,079,218 standard silver dollars and 373,461,485 dollars in subsidiary silver coin.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

Fiscal year ended June 30—	Population (thousands)	Gold bullion and coin (thousands)	Silver coin [1] (thousands)	Per capita

1938	130,085	12,962,954	1,957,704	99.65	15.05	114.70

[1] For 1934 and thereafter includes silver bullion revalued to $1.29+ per fine troy ounce and set up a security against silver certificates.

[2] On Jan. 31, 1934, the weight of the gold dollar was reduced from 25.8 grains of gold nine-tenths fine to 15 5/21 grains nine-tenths fine, thereby giving gold a monetary value of $35 per fine troy ounce. Proclamation of Jan. 31, 1934.

Stock of Domestic Coin in the United States, December 31, 1937[1]

On December 31, 1937, the stock of domestic coin in the United States was $1,075,093,987 as shown in the table below:

Item	Silver	Minor	Total
Estimated stock of coin in United States Dec. 31, 1936	$903,216,544	$147,281,468	$1,050,498,012
Coinage executed, calendar year 1937	22,035,561	9,088,432	31,123,993
Imports, United States coin, calendar year 1937	278,422		278,422
Total	925,530,527	156,369,900	1,081,900,427
Less:			
Exports United States coin, calendar year 1937	9,582		9,582
United States coin withdrawn from monetary use, calendar year 1937, face amount	6,125,212	571,646	6,696,858
United States coin used in the industrial arts, and general disappearance, estimated, calendar year 1937	100,000		100,000
Total	6,234,794	571,646	6,806,440
Estimated stock of coin in United States Dec. 31, 1937	919,295,733	155,798,254	1,075,093,987

[1] For method of estimating, see p. 48.

NOTE.—The number of standard silver dollars coined from 1878 to Dec. 31, 1937, was 847,629,915 which, added to Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 848,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000; the net export from November 1919 to July 1920 in movement due to the high price of silver was 28,287,142; those melted under the terms of the Pittman Act of Apr. 23, 1918, total 270,232,722; those melted otherwise (mutilated, etc.) since 1883 numbered 227,075, and the number of Hawaiian dollars melted to Dec. 31, 1937, was 455,329; a total disposition of 301,697,268, leaving in the United States on Dec. 31, 1937, 547,079,506 standard silver dollars and 372,216,227 dollars in subsidiary silver coin.

[1] Data for individual years published in reports of the Director of the Mint for 1931 and for prior years.

NOTE.—Net exports are shown with a prefixed minus sign. The quantities in the column "Net imports" for both gold and silver for the years 1873–74 to 1886–87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 toals, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

Price of silver in London and in New York, 1937–38

1728	15.11	1770	14.62	1812	16.11	1854	15.33	1896	30.59		

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, from 1897 to 1914 from daily London quotations, and since from daily New York quotations.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production and coinage of gold and silver and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission, and the available data for the calendar year under review are usually incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries the most reliable data available are used in compiling world statistics.

[2] Gold delivered by the Reichsbank.

REVISIONS, 1936 MONETARY STOCKS

Principal revisions of monetary stocks for 1936, published in last year's volume, give:

Australia's total silver stock as $36,988,000 instead of $31,443,000; paper circulation as £47,206,000 instead of £50,539,000.

Brazil's paper circulation as 4,051,000,000 milreis instead of 4,030,000,000 milreis.

British Guiana's paper circulation as $1,386,000 instead of $1,267,000.

Egypt's total gold stock as $54,781,000 instead of $52,229,000.

Great Britain's total silver stock as $273,657,000 instead of $269,929,000.

Iceland's total gold stock as $1,019,000 instead of $1,361,000; paper circulation as 10,560,000 crowns instead of 11,000,000.

Panama's total gold stock as $13,000 instead of none; total silver stock as $1,335,000 instead of $1,010,000.

Salvador's total gold stock as $5,222,000 instead of $6,527,000.

Spain, silver stock in Bank of Spain as $53,296,000 instead of $225,244,000, which included that in circulation.

Syria's total silver stock as $1,494,000 instead of none.

Trinidad's gold stock as $1,000 instead of none; silver stock in home banks as $183,000 instead of $493,000; paper circulation as 2,194,000 West Indian dollars instead of 1,781,000.

Venezuela's total silver stock as $26,151,000 instead of $25,309,000.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEAR 1937

The following compilations have been made from answers to official questionnaires of the United States Mint Bureau, central bank reports, and other official sources, except as indicated by footnote 1. It is understood that material amounts of gold are not reported by several countries, such as amounts held in secret funds for stabilizing currencies and those hoarded or held outside of regularly reported stocks. The amount of silver in circulation in many countries is not obtainable.

Population figures are principally from the Statistical Yearbook of the League of Nations, 1937–38.

Monetary stock of principal countries of the world, end of calendar year 1937 (subject to revision)

Stated in United States money (000 omitted), except paper circulation, which is stated in monetary unit of issuing country (000 omitted). $1=15\frac{5}{21}$ grains of gold 9/10 fine; i. e. an ounce of fine gold=$35. Population (000 omitted)

Country	Monetary unit			Gold stock (conversions to United States equivalent at legal parity except as indicated by footnotes)			Monetary silver stock in government treasuries, in banks, and, when data available, in circulation (United States equivalent of reported face amount at exchange rate)	Paper circulation in monetary unit of issuing country	Population	Per capita

[1] Data used from other than official sources:
Austria, silver data from Bulletin de Statistique, January 1938.
Czechoslovakia, paper currency data from The Statist, Jan. 15, 1938.
Denmark, gold stock and paper currency data from The Statist, Jan. 8, 1938.
French West Africa, paper currency data from Supplement Colonial de L'Economiste Europeen, July 22, 1938.
Great Britain, paper currency data from The Statist, May 28, 1938.
Guiana, French, paper currency data from Supplement Colonial de L'Economiste Europeen, Nov. 19, 1937.
Indochina, French, paper currency data from L'Economiste Europeen, Apr. 1, 1938.
Italy, gold stock and paper currency data from London Bankers' Magazine, May 1938.
Portugal, gold stock and paper currency data from The Statist, Apr. 9, 1938.
Reunion Island, gold stock and paper currency data from Supplement Colonial de L'Economiste Europeen, May 20, 1938.

[2] Exchange rates have been given insofar as obtainable; in some cases they are nominal.

[3] Includes silver bullion.

[4] Continental United States only.

See additional footnotes on p. 98.

[5] Bases used for conversions of gold holdings to United States dollars:
Algeria, reported in old French francs (United States equivalent, $0.0663).
Argentina, gold holdings of central bank reported in paper pesos which were revalued May 31, 1935 (United States equivalent, $0.3296); gold holdings held abroad reported in fine ounces.
Austria, revaluation of December 1936, at 0.16733 grams of fine gold per schilling (United States equivalent, $0.1883).
Bolivia, reported in fine ounces, United States dollars, and pounds sterling.
Brazil, reported in fine kilograms.
Canada, holdings of Government Treasury converted at legal parity; holdings of Bank of Canada converted at average exchange rate of Canadian dollar during December 1937.
China, reported in fine ounces.
Colombia, reported in fine ounces.
Ecuador, revaluation of June 13, 1936, at rate of 11.6466 sucres per gram of fine gold (United States equivalent, $0.0966).
Finland, gold holdings earmarked abroad reported in fine ounces.
France, gold holdings of the Bank of France revalued by decree of July 27, 1937, at 43 milligrams of gold 0.900 fine (United States equivalent, $0.043548).
Latvia, revaluation of Jan. 1, 1937, on the basis of the price of gold in terms of sterling in London (25.22 lats = £1 sterling) (United States equivalent, $0.1960).
Mexico, reported in fine kilograms.
Morocco, see "France," above, for valuation of gold holdings.
Portuguese East Africa, reported in English pounds.
Rumania, revaluation of Nov. 6, 1936, at the rate of 153,333.33 lei per kilogram of fine gold (United States equivalent, $0.0073).
Salvador, reported in United States dollars.
Switzerland, revalued in September 1936, at 135 percent of their former parity (United States equivalent, $0.2419).
Turkey, reported in fine grams.

[6] Net issues of silver coin since 1858 and silver bullion in the Bank of Canada.

[7] Algeria and Tunis, monetary unit is the French franc; see "France" below for devaluation of the franc.
France, law of Oct. 1, 1936, provided for new gold content of franc to be fixed within limits of 43 and 49 milligrams of gold 0.900 fine. This law was superseded by degree of June 30, 1937, which stated that gold content of the franc shall be fixed ultimately by a decree adopted by the Council Ministers. Until issuance of such decree a stabiliaztion fund shall regulate the relationship between the franc and foreign currencies.
French Equatorial Africa, monetary unit is the French franc; see "France" above for devaluation of the franc.
French West Africa, monetary unit is the French franc; see "France" above for devaluation of the franc.
Guiana, French, monetary unit is the French franc; see "France" above for devaluation of the franc.
Indochina, French, monetary unit, the piaster, has a par value of 10 French francs; see "France" above for devaluation of the franc.
Latvia, law of Sept. 28, 1936, pegged the lat to sterling at 2,522 lati to £100.
Madagascar, monetary unit is the French franc; see "France" above for devaluation of the franc.
Mexico, decree of Aug. 28, 1936, left the monetary unit the peso, to be later defined by law.
Morocco, monetary unit is the French franc; see "France" above for devaluation of the franc.
Reunion Island, monetary unit is the French franc; see "France" above for devaluation of the franc.
Society Islands, monetary unit is the French franc; see "France" above for devaluation of the franc.
Switzerland, order of Federal Council enacted Sept. 27, 1936, instructed the Swiss National Bank to maintain the gold parity of the Swiss franc at a value ranging between 190 and 215 milligrams of fine gold.
Syria, monetary unit, the Syrian pound, has a par value of 20 French francs; see "France" above for devaluation of the franc.
Uruguay, monetary unit, the peso, established by monetary law of Jan. 12, 1938, at 0.585018 gram of pure gold (United States equivalent, $0.6583).

[8] Includes base metal coin.
[9] Average exchange rate for 1937.
[10] Prior years' figures at new equivalents where equivalents other than the legal parity are applicable.
[11] On Sept. 30, 1937.
[12] United States coin and currency also circulate.
[13] Silver in circulation not included.
[14] United States currency is circulating media.
[15] Net issues of silver coin.
[16] Exclusive of Canadian bank notes which are the principal circulating media.
[17] Silver converted to United States equivalent at legal rate.
[18] On June 30, 1937.
[19] On Dec. 25, 1937.
[20] Exclusive of British coins and currency which still circulate in Eire.
[21] Spanish bank notes and coin also circulate.
[22] The British Exchange equalization account held 1,489,000,000 of gold on Mar. 31, 1938, in addition to that reported above, per Federal Reserve Bulletin, October 1938.
[23] On Dec. 29, 1937.
[24] Includes British coin circulating in Eire.
[25] Includes British currency circulating in Eire.
[26] In April 1938, per Federal Reserve Bulletin, October 1938.
[27] Estimated.
[28] The Switzerland Exchange equalization account held $130,000,000 of gold in June 1937, in addition to that reported above, per Statistical yearbook of the League of Nations, 1937-38.
[29] Value of the ruble (10 rubles equivalent to 1 chervonetz) fixed in foreign exchange at 1 United States dollar equals 5.30 rubles (United States equivalent, $0.18868).
[30] Data omitted because of indefiniteness or unavailability.
[31] Silver standard abandoned by decree of Nov. 3, 1935; exchange rate for yuan fixed initially at about 1s. 2⅛d. British currency (United States equivalent about $0.2950).
[32] Fluctuates with the price of silver.
[33] On Jan. 1, 1935.
[34] Silver valued at United States equivalent of the price of silver in London on Dec. 31, 1937. ($0.42427 per fine ounce.)
[35] Includes 515,436 British sterling paper converted to escuados at 111.89 to the pound.
[36] Gold and silver.
[37] Includes notes in circulation in Northern Rhodesia and in Nyasaland.
[38] On June 30, 1938.
[39] Australian coins and notes are the circulating media.

WORLD PRODUCTION OF GOLD AND SILVER

[1] Average price per fine ounce in New York.
[2] Estimate based on imports of ore and bullion into United States and Great Britain and interrogatory data.
[3] Estimate based on other years' production.
[4] Prior years' figures.
[5] Fiscal year ended June 30.
[6] Conjectural.
[7] Amount exported.
[8] Including production for Portugal.
[9] Incomplete.
[10] Data from the 1937 Year Book of the American Bureau of Metal Statistics.

Production of gold and silver in the world since the discovery of America

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint]

Period	Gold				Silver				Percentage of production			
	Annual average for period		Total for period		Annual average for period		Total for period		By weight		By value	
	Fine ounces	Value	Fine ounces	Value [1]	Fine ounces	Commercial value [1]	Fine ounces	Commercial value [2]	Gold	Silver	Gold	Silver

[1] Valued, prior to 1934, at $20.67+ per fine ounce; 1934 and thereafter, at $35 per fine ounce.

[2] Valued, prior to 1701, at $1.38 per fine ounce, which corresponds with a commercial ratio of silver to gold of approximately 15 to 1, the ratio which prevailed for over 100 years subsequent to 1687, as per tabulation elsewhere in this volume. From 1701 to 1840 the value corresponds with the average ratios of silver to gold as per the tabulation elsewhere in this volume. From 1841 the annual averages per fine ounce in London are used except for the years 1915 to 1921, and 1931 to 1937, when New York prices are used. Tabulations of silver quotations appear elsewhere in this volume.
